Hybrid Solutions for the Modelling of Complex Environmental Systems Christian E. Vincenot,Stefano Mazzoleni,Lael Parrott,2017-01-11 Systems studied in environmental science due to their structure and the heterogeneity of the entities composing them often exhibit complex dynamics that can only be captured by hybrid modeling approaches While several concurrent definitions of hybrid modeling can be found in the literature it is defined here broadly as the approach

consisting in coupling existing modelling paradigms to achieve a more accurate or efficient representation of systems The need for hybrid models generally arises from the necessity to overcome the limitation of a single modeling technique in terms of structural flexibility capabilities or computational efficiency This book brings together experts in the field of hybrid modelling to demonstrate how this approach can address the challenge of representing the complexity of natural systems Chapters cover applied examples as well as modeling methodology

selected at least for the papers in general sessions with a 62% acceptance rate. Traditionally ICIRA 2010 holds a series of plenary talks and we were fortunate to have two such keynote speakers who shared their expertise with us in diverse topic areas spanning the range of intelligent robotics and application activities.

Ad Hoc Networks Jun Zhi-zhong, David Simplot-Ryl, Victor CM Leung, 2010-12-15 Ad hoc networks which include a variety of autonomous networks for specific purposes promise a broad range of civilian commercial and military applications. These networks were originally envisioned as collections of autonomous mobile or stationary nodes that dynamically auto configure themselves into a wireless network without relying on any existing network infrastructure or centralized administration. With the significant advances in the last decade the concept of ad hoc networks now covers an even broader scope referring to the many types of autonomous wireless networks designed and deployed for a specific task or function such as wireless sensor networks, vehicular networks, home networks and so on. In contrast to the traditional wireless networking paradigm, such networks are all characterized by sporadic connections, highly error prone communications, distributed autonomous operation and fragile multi hop relay paths. The new wireless networking paradigm necessitates reexamination of many established concepts and protocols and calls for developing a new understanding of fundamental problems such as interference, mobility, connectivity, capacity and security among others. While it is essential to advance theoretical research on fundamental and practical research on efficient policies, algorithms and protocols, it is also critical to develop useful applications, experimental prototypes and real world deployments to achieve an immediate impact on society for the success of this wireless networking paradigm.

5G Wireless Systems Yang Yang, Jing Xu, Guang Shi, Cheng-Xiang Wang, 2017-09-14 This book focuses on key simulation and evaluation technologies for 5G systems. Based on the most recent research results from academia and industry, it describes the evaluation methodologies in depth for network and physical layer technologies. The evaluation methods are discussed in depth. It also covers the analysis of the 5G candidate technologies and the testing challenges, the evolution of the testing technologies, fading channel measurement and modeling, software simulations, software hardware cosimulation, field testing and other novel evaluation methods. The fifth generation 5G mobile communications system targets highly improved network performances in terms of the network capacity and the number of connections. Testing and evaluation technologies is widely recognized and plays important roles in the wireless technology developments along with the research on basic theory and key technologies. The investigation and developments on the multi level and comprehensive evaluations for 5G new technologies provides important performance references for the 5G technology filtering and future standardizations. Students focused on telecommunications, electronic engineering, computer science or other related disciplines will find this book useful as a secondary text. Researchers and professionals working within these related fields will also find this book useful as a reference.
