<u>H</u> Low Amplitude	L. A sound that is a mixture of all wavelengths	
	M. Sounds that are organized by people	

Give short answers:

1. Can sound travel through empty space? Why or why not?
No; there can be no sound vibrations where there is no air.
2. How are sound waves like water waves? How are they not like water waves?
Both can have frequency and amplitude, but water waves are transverse and sound waves are longitudinal.
3. Name 2 ways a player of a musical instrument can change the sound of the instrument.
They can make the pitch higher or lower or make the sound louder or softer.
4. How can an instrument with only 4 strings get more than 4 different pitches?
You can make the vibrating part of the string shorter, and the pitch higher, by holding the string down with one finger.
5. When a trumpet player pushes down a valve, she opens an extra loop of tubing. What does this do to the trumpet? To the sound?
This in effect makes the trumpet longer, so the sound is lower.
