

## AP STATISTICS Unit 5: Probability

**Enduring understanding (Big Idea):** Students will understand randomness; the concepts and rules of probabilities; how to use simulation to estimate probabilities; probability models and their use to describe chance behavior; and conditional probabilities and independence.

### Essential Questions:

1. What is a random phenomenon, when do we need to consider it and how can we investigate it using probability and simulation?
2. How is the likelihood of a random event occurring related to the long-term frequency of occurrence of the event?
3. What is the sample space of a random phenomenon?
4. For a finite number of outcomes, how do we use the multiplication principle to determine the number of outcomes?
5. How do we construct Tree diagrams, Venn diagrams and Two-way tables to organize visually the use of the multiplication and addition rules to determine the probabilities of events?
6. For continuous variables, how do we use geometric areas to find probabilities (areas under density curves) of events (intervals on the horizontal axis) and for determine the likelihood of an event?
7. How do we determine if a given probability distribution is valid?
8. How can we perform a simulation by use of a random number table, a calculator or software to investigate the likelihood of an outcome occurring?
9. What is a joint probability? How do we use its properties to solve problems?
10. What are the probability rules and how do we use them to determine if two events are disjoint and/or complementary, find the probabilities of unions and intersections, and find the joint probability of two events??
11. What is a conditional probability, how do we find it, and how do we use it to determine potential causes of events?
12. What is the property of Independence, and how is it related to Conditional Probabilities?
13. Are mutually exclusive events independent? Why or why not?
