Unit 3 Analytic Geometry

Analytic Geometry is a branch of mathematics which investigates the relations, properties, and measurement of solids, surfaces, lines, and angles.

3.1 Cartesian Coordinate System

The rectangular coordinate system, also called the cartesian coordinate system or the x - y coordinate system is shown

The rectangular coordinate system consists of 4 **quadrants**, a **horizontal axis**, a **vertical axis**, and the **origin**. The horizontal axis is usually called the **x -axis**, and the vertical axis is usually called the **y -axis**. The **origin** is the point where the two axes cross. The coordinates of the origin are $(0,0)$. The notation (x, y) is called an **ordered pair**. The first coordinate (or **abscissa**) is known as the x -coordinate, while the second coordinate (or **ordinate**) is the y -coordinate.

3.2 Distance Between Two Points

Let $P_1(x_1, y_1)$ and $P_2(x_2, y_2)$ be two points in the rectangular coordinate system. Then the distance between these two points is given by

$$d = \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2}$$

Example Find the distance between $(-3, 5)$ and $(-6, -8)$.

Solution:

Applying the distance formula, we have

$$\begin{aligned} d &= \sqrt{(x_1 - x_2)^2 + (y_1 - y_2)^2} = \sqrt{(-3 - (-6))^2 + (5 - (-8))^2} \\ d &= \sqrt{(3)^2 + (13)^2} = \sqrt{178} \end{aligned}$$

3.3 Division of a Line Segment

A line segment may be divided internally (when the point of division is on the line segment) or externally (when the point of division lies on the extension). Let $P_1(x_1, y_1)$ and $P_2(x_2, y_2)$ be the endpoints of the line segment and suppose $k = \frac{P_1P}{PP_2}$. Then if $P(x, y)$ divides the line segment then

$$x = x_1 + k(x_2 - x_1) \quad \text{and} \quad y = y_1 + k(y_2 - y_1)$$

Example The line segment from $(2, 5)$ to $(7, -1)$ is extended a distance equal to twice its length. Find the terminal point.

The Bio-inspired X-Structure/Mechanism Approach for Exploring Nonlinear Benefits in Engineering Xingjian Jing, 2024-09-21 This book presents a unique approach to the design and analysis of beneficial nonlinearity which can take an important and critical role in engineering systems and thus cannot be simply ignored in structural design dynamic response analysis and parameter selection A key issue in the area is thus systematically addressed about how to analyze and design potential nonlinearities introduced to or inherent in a system of under study which is a must do task in many practical applications involving vibration control energy harvesting sensor systems and robots etc This book therefore presents an up to date summary on the most recent development of a cutting edge method for nonlinearity manipulation and employment developed in recent several years named as the X shaped structure or mechanism approach The method is inspired from animal leg limb skeletons and can provide passive low cost high efficiency adjustable and beneficial nonlinear stiffness high static and ultra low dynamic nonlinear damping dependent on resonant frequency and vibration excitation amplitude and nonlinear inertia low static and high dynamic individually or simultaneously The X shaped structure or mechanism is a generic structure or mechanism representing a class of beneficial geometric nonlinearity with realizable and flexible linkage mechanism or

structural design of different variants or forms quadrilateral diamond polygon K Z S V shape or others which all share similar geometric nonlinearity and thus similar nonlinear stiffness damping properties flexible in design and easy to implement This book systematically reviews the research background motivation essential bio inspired ideas advantages of this novel method beneficial nonlinear properties in stiffness damping and inertia and potential applications which have been developed ever since 2010 This book reveals important nonlinear properties and dynamic characteristics of nonlinear inertia that can be provided through the X structure mechanism and also presents advantageous features of X structure mechanism methods in multi direction vibration control **Surveying Practice** Jerry A. Analysis Vincent Blackburn, Shae Brennan, John Ruggiero, 2014-06-07 This book provides a complete analysis of educational production and costs using the nonparametric technique known as Data Envelopment Analysis DEA The book focuses on estimation of technical allocative and scale efficiency in the public sector characterized by the influence of exogenous socio economic variables State of the art DEA models will be presented and fully discussed Specific education topics important to policy makers including adequacy technical allocative and scale efficiency productivity and environmental costs will be analyzed To illustrate how these techniques can be applied to school systems worldwide the authors use data on Australian elementary and high schools to develop nonparametric measures that will help inform current policy debate in Australia The purpose of the book is to provide a comprehensive analysis of educational production using numerous public sector DEA

models We provide a review of DEA with SAS programming code to estimate technical scale and allocative efficiency in chapter 2 In chapter 3 we extend the DEA models to control for exogenous factors of production SAS code is also provided to estimate all public sector models We use simulated data to illustrate the results Chapters 4 6 provide a complete analysis of the primary and secondary schools We analyze input and output oriented models and derive measures of technical allocative and scale efficiency We also provide estimates of environmental costs that arise from schools facing different operating environments based on socioeconomic conditions In addition we show how DEA can provide insight on adequacy the minimum cost of providing a pre defined adequate education The models presented are consistent with public sector production in general and educational production in particular We also provide a complete analysis of educational productivity for both primary and secondary schools using state of the art public sector Malmquist measures The authors use current data on Australian schools to highlight important policy questions related to efficiency and productivity given concerns that schools are not allocatively scarce resources in an economic efficient way This research focus comes at an important watershed moment in the Australian Federal Governments current involvement in designing new nationally consistent funding models for both government and non government schooling sectors with effect from 2014 A new National School Resourcing Standard is proposed to be implemented signaling a move to resource adequacy school efficiency and value for money dimensions These standards are consistent with the measures presented and estimated in this book As a result the models implemented in this book can serve as the basis to evaluate the funding changes associated with the transition from a centralized to a new decentralized set of school funding arrangements

Stability Analysis of Plates and Shells, 1998 **Computer Vision and Mathematical Methods in Medical and Biomedical Image Analysis** Milan Sonka, Ioannis A. Kakadiaris, Jan Kybic, 2004-09-20 Medical imaging and medical image analysis are rapidly developing. While medical imaging has already become a standard of modern medical care, medical image analysis is still mostly performed visually and qualitatively. The ever increasing volume of acquired data makes it impossible to utilize them in full. Equally important, the visual approaches to medical image analysis are known to suffer from a lack of reproducibility. A significant research effort is devoted to developing algorithms for processing the wealth of data available and extracting the relevant information in a computerized and quantitative fashion. Medical imaging and image analysis are interdisciplinary areas combining electrical computer and biomedical engineering, computer science, mathematics, physics, statistics, biology, medicine, and other fields. Medical imaging and computer vision interestingly enough have developed and continue developing somewhat independently. Nevertheless, bringing them together promises to be the best of both of these fields. We were enthusiastic when the organizers of the 2004 European Conference on Computer Vision (ECCV) allowed us to organize a satellite workshop devoted to medical image analysis.
