traced back to such food systems among them Campylobacter Nipah virus Q fever hepatitis E and a variety of novel influenza variants Agribusiness has known for decades that packing thousands of birds or livestock together results in a monoculture that selects for such disease But market economics doesn't punish the companies for growing Big Flu it punishes animals the environment consumers and contract farmers Alongside growing profits diseases are permitted to emerge evolve and spread with little check That is writes evolutionary biologist Rob Wallace it pays to produce a pathogen that could kill a billion people In Big Farms Make Big Flu a collection of dispatches by turns harrowing and thought provoking Wallace tracks the ways influenza and other pathogens emerge from an agriculture controlled by multinational corporations Wallace details with a precise and radical wit the latest in the science of agricultural epidemiology while at the same time juxtaposing ghastly phenomena such as attempts at producing featherless chickens microbial time travel and neoliberal Ebola Wallace also offers sensible alternatives to lethal agribusiness Some such as farming cooperatives integrated pathogen management and mixed crop livestock systems are already in practice off the agribusiness grid While many books cover facets of food or outbreaks Wallace's collection appears the first to explore infectious disease agriculture economics and the nature of science together Big Farms Make Big Flu integrates the political economies of disease and science to derive a new understanding of the evolution of infections Highly capitalized agriculture may be farming pathogens as much as chickens or corn
