How to Build a Habitable Planet Charles H. Langmuir, Wallace Broecker, 2012-08-13 A classic introduction to the story of Earth's origin and evolution revised and expanded for the twenty first century Since its first publication more than twenty five years ago *How to Build a Habitable Planet* has established a legendary reputation as an accessible yet scientifically impeccable introduction to the origin and evolution of Earth from the Big Bang through the rise of human civilization This classic account of how our habitable planet was assembled from the stuff of stars introduced readers to planetary Earth and climate science by way of a fascinating narrative Now this great book has been made even better Harvard geochemist Charles Langmuir has worked closely with the original author Wally Broecker one of the world's leading Earth scientists to revise and expand the book for a new generation of readers for whom active planetary stewardship is becoming imperative Interweaving physics astronomy chemistry geology and biology this sweeping account tells Earth's complete story from the synthesis of chemical elements in stars to the formation of the Solar System to the evolution of a habitable climate on Earth to the origin of life and humankind The book also addresses the search for other habitable worlds in the Milky Way and contemplates whether Earth will remain habitable as our influence on global climate grows It concludes by considering the ways in which humankind can sustain Earth's habitability and perhaps even participate in further planetary evolution Like no other book *How to Build a Habitable Planet* provides an understanding of Earth in its broadest context as well as a greater appreciation of its possibly rare ability to sustain life over geologic time Leading schools that have ordered recommended for reading or adopted this book for course use Arizona State University Brooklyn College CUNY Columbia University Cornell University ETH Zurich Georgia Institute of Technology Harvard University Johns Hopkins University Luther College Northwestern University Ohio State University Oxford Brookes University Pan American University Rutgers University State University of New York at Binghamton Texas A M University Trinity College Dublin University of Bristol University of California Los Angeles University of Cambridge University Of Chicago University of Colorado at Boulder University of Glasgow University of Leicester University of Maine Farmington University of Michigan University of North Carolina at Chapel Hill University of North Georgia University of Nottingham University of Oregon University of Oxford University of Portsmouth University of Southampton University of Ulster University of Victoria University of Wyoming Western Kentucky University Yale University

Wilson,1992 View a collection of videos on Professor Wilson entitled On the Relation of Science and the Humanities In the Amazon Basin the greatest violence sometimes begins as a flicker of light beyond the horizon There in the perfect bowl of the night sky untouched by light from any human source a thunderstorm sends its premonitory signal and begins a slow journey to the

observer who thinks the world is about to change Watching from the edge of the Brazilian rain forest witness to the sort of violence nature visits upon its creatures Edward O Wilson reflects on the crucible of evolution and so begins his remarkable account of how the living world became diverse and how humans are destroying that diversity Wilson internationally regarded as the dean of biodiversity studies conducts us on a tour through time traces the processes that create new species in bursts of adaptive radiation and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years The five enormous natural blows to the planet such as meteorite strikes and climatic changes required 10 to 100 million years of evolutionary repair The sixth great spasm of extinction on earth caused this time entirely by humans may be the one that breaks the crucible of life Wilson identifies this crisis in countless ecosystems around the globe coral reefs grasslands rain forests and other natural habitats Drawing on a variety of examples such as the decline of bird populations in the United States the extinction of many species of freshwater fish in Africa and Asia and the rapid disappearance of flora and fauna as the rain forests are cut down he poignantly describes the death throes of the living world s diversity projected to decline as much as 20 percent by the year 2020 All evidence marshaled here resonates through Wilson s tightly reasoned call for a spirit of stewardship over the world s biological wealth He makes a plea for specific actions that will enhance rather than diminish not just diversity but the quality of life on earth Cutting through the tangle of environmental issues that often obscure the real concern Wilson maintains that the era of confrontation between forces for the preservation of nature and those for economic development is over he convincingly drives home the point that both aims can and must be integrated Unparalleled in its range and depth Wilson s masterwork is essential reading for those who care about preserving the world biological variety and ensuring our planet s health **Letters to Linnaeus** Sandra

Knapp, Quentin Wheeler, Quentin D. Wheeler, 2009 Letters addressed to Carl Linnaeus from eclectic set of authors who reflect on his personal and professional influence on their work Published to celebrate 250th anniversary of publication of *Systema Naturae* Thick Canopy Shields Raina Mooncrest, AI, 2025-02-27 Thick Canopy Shields explores the remarkable defense mechanisms of rainforest ecosystems focusing on how these environments protect themselves from heavy rainfall and teeming insect populations The book details the intricate interplay of biological adaptations and ecological interdependence that allow rainforests to thrive For instance the unique architecture of the canopy reduces erosion by intercepting rainfall and many plants have evolved drip tips on their leaves to facilitate water runoff The book examines the roles of insects as pollinators decomposers and herbivores and uncovers the defense strategies plants and insects employ such as chemical defenses and camouflage By emphasizing the vital role of the canopy and species interactions Thick Canopy Shields highlights the importance of understanding these systems for effective conservation efforts The book progresses by first introducing the structural components of the rainforest then detailing how the canopy influences rainfall patterns and finally examining insect populations and their interplay with the canopy This insightful work draws upon field studies experimental

research and meta analyses presenting data from long term ecological monitoring programs to paint a comprehensive picture of rainforest ecology Understanding these protective mechanisms is crucial especially as deforestation and climate change pose significant threats to these invaluable ecosystems The book offers a holistic perspective combining insights from botany entomology and ecology making it an invaluable resource for anyone interested in the science of life and rainforest conservation Cell Biology and Genetics Cecie Starr,Ralph Taggart,Christine A. Evers,Lisa Starr,2005-09 Brief non major biology text includes Unit 1 and Unit II from BIOLOGY THE UNITY AND DIVERSITY OF LIFE and gives access to media through 1Pass including BiologyNow How do I Prepare vMentor and Infotrac College edition *The Nature of Life* Gail R.
