

Characteristics and Origins of Life

The Origin of Life

- Characteristics of Life: to be considered alive a molecule must...
 - Be organic. The organic molecules needed are amino acids, the building blocks of life
 - Have a metabolism
 - Be capable of replication
- Learning about the origin of life: to look for information regarding the origin of life, scientists...
 - Perform experiments to recreate the environmental conditions found at that time
 - Study the living creatures that make their homes in the types of extreme environments that were typical in Earth's early days
 - Seek traces of life left by ancient microorganisms, also called **microbes**, such as microscopic features or isotopic ratios indicative of life

Study Tip

The central dogma of biology validates the importance of the Miller-Urey experiment: DNA transcribes into RNA, which translates into amino acids, which combine to form proteins, the building blocks of life.

Amino acids form polypeptide chains

Amino Acids

- **Amino acids** are the building blocks of life because they create proteins
 - Linked together by covalent bonds to form polymers called polypeptide chains
- Proteins are the most abundant class of biological molecules
- Miller-Urey Experiment
 - Placed hydrogen, methane, and ammonia in a flask of heated water that created water vapor, which was called primordial soup and simulated the Earth's early atmosphere. Sparks simulated lightning, and the gases combined to form water-soluble organic compounds including amino acids
- Might have also originated at hydrothermal vents or deep in the crust where Earth's internal heat is the energy source
