Seba, 2014-06-27 The industrial age of energy and transportation will be over by 2030 Maybe before Exponentially improving technologies such as solar electric vehicles and autonomous self-driving cars will disrupt and sweep away the energy and transportation industries as we know it The same Silicon Valley ecosystem that created bit-based technologies that have disrupted atom-based industries is now creating bit and electron-based technologies that will disrupt atom-based energy industries Clean Disruption projections based on technology cost curves business model innovation as well as product innovation show that by 2030 All new energy will be provided by solar or wind All new mass market vehicles will be electric All of these vehicles will be autonomous self-driving or semi-autonomous The new car market will shrink by 80% Even assuming that EVs don't kill the gasoline car by 2030 the self-driving car will shrink the new car market by 80% Gasoline will be obsolete Nuclear is already obsolete Up to 80% of highways will be redundant Up to 80% of parking spaces will be redundant The concept of individual car ownership will be obsolete The Car Insurance industry will be disrupted The Stone Age did not end because we ran out of rocks It ended because a disruptive technology ushered in the Bronze Age The era of centralized command and control extraction resource-based energy sources oil gas coal and nuclear will not end because we run out of petroleum natural gas coal or uranium It will end because these energy sources the business models they employ and the products that sustain them will be disrupted by superior technologies product architectures and business models This is a technology-based disruption reminiscent of how the cell phone Internet and personal computer swept away industries such as landline telephony publishing and mainframe computers Just like those technology disruptions flipped the architecture of information and brought abundant cheap and participatory information the clean disruption will flip the

architecture of energy and bring abundant cheap and participatory energy Just like those previous technology disruptions the Clean Disruption is inevitable and it will be swift

Design and Construction of an RFID-enabled Infrastructure Nagabhushana Prabhu,2013-11-20

Internet 2.0 previously called the Internet of Things presents a tantalizing vision of bridging the cyber and physical worlds to forge a seamless planet wide infrastructure in which cyber resources and physical objects can interact without human intervention The technology needed to build the infrastructure already exists However more than a decade after the vision of Internet 2.0 was articulated it remains largely unrealized except in isolated settings Following a background discussion Design and Construction of an RFID enabled Infrastructure the Next Avatar of the Internet addresses three questions what are the barriers to the emergence of Internet 2.0 as a global infrastructure What are the features that Internet 2.0 architecture must have if it is to become a successful global infrastructure How can one build a prototype of Internet 2.0 The quest for answers to the above questions threads the narrative through the birthing process and maturation of two successful global infrastructures the Internet and the web Based on a review of the design philosophies underlying the Internet and the Web their histories and the strategic stewardship that midwived their births the book presents the architectural guidelines for the Internet 2.0 infrastructure as well as a blueprint for the construction of its prototype The discussion in the book is consolidated into a list of technical and strategic guidelines intended to facilitate the incubation of Internet 2.0

The Internet as a Technology-Based Ecosystem Nigel Walton,2017-05-04 This book examines and critiques classical approaches to strategic analysis whilst exploring alternative methods which utilise ecosystem and platform concepts as well as chaos and complexity theories The innovative study provides a critique of the neoclassical Newtonian school of strategy and proves it to be largely inappropriate as a decision making methodology in today's internet based market By developing a new biological hydrothermal vent model in which analogical comparisons are made with the Information Communication Technology ICT sector the chapters challenge existing paradigms of competitive advantage and analyse the extent to which the Internet can be considered to be an ecosystem in its own right The Internet as a Technology Based Eco System offers a range of alternative models and analytical frameworks for the analysis of internet based technology companies in the twenty first century creating a valuable tool for students and academics undertaking research in strategy technology and electronic engineering

Dialogues on Mobile Communication Adriana de Souza e Silva, 2016-10-04 In this book top scholars in the field of mobile
communication discuss the major issues related to the use of mobile phones in today s society such as the tension between
private and public youth mobile culture creative appropriations of mobile devices and mobile methods Each chapter unfolds
as an open dialogue between scholars and graduate students of communication They contain an introduction by a student
followed by a short lecture and a question and answer section with the students and a closing statement by a student that
responds to the scholar s argument The book is a valuable resource not only for individuals interested in mobile

boundaries of classrooms and promote collaborative learning practices *Securing the Digital Frontier* Andrew
Martin, 2025-04-01 Cyber space is easily the most complex thing humans have ever created With billions of people and
devices all connected together vulnerability and compromise are inevitable The complexity continues to grow and with it
comes the emergent insecurity brought by an ever developing frontier where digital devices and connected people meet
Security challenges present themselves increasingly often and with ever greater impacts This is not going to change anytime
soon Although the internet has transformed communication business and social life for the better the construct of cyber
space is incredibly fragile and presents endless risk Connecting every corner of our lives to those of billions across the world
the frontier is slender between the good and the bad benefit and catastrophe real and fake security and insecurity Cyber
security advice can be confusing contradictory and sometimes utterly detached from reality Too easily people feel guilty for
not knowing what to do or failing to live up to expectations People particularly business leaders and policy makers must daily
make security sensitive decisions sometimes unknowingly without being security experts *Securing the Digital Frontier* doesn
t offer easy answers but instead explains sixteen dimensions of this dynamic problem and its current partial solutions The
strong technology of encryption has become commonplace and is a huge benefit if deployed well but how can you tell

Programming errors give rise to security problems but why can we not eliminate them Privacy is tied up with security but can the two work against each other Cyber space is international how can domestic laws protect us And what happens when those laws come into conflict with technologies like encryption Why do you need a punctuation symbol and a capital letter in your password anyway Through a grasp of the big picture through technical and human perspectives we can begin to explore ways to unwind some of the complexity and find ways to contain the risk
