

# Prokaryotic and Eukaryotic Cells

Do all cells have the same structure?

## Why?

An efficiency apartment is a one-room apartment. This one room is where you sleep, eat, shower, and entertain your guests. It all happens in one room. It is a simple way of living in a small space. A mansion is a large, complex living space with many separate rooms. There are rooms for cooking, eating, sleeping, bathing, reading, watching TV, entertaining guests, exercising, and storage. The rooms in a mansion are constructed for the specific things you would like to be able to do. You can live in simple efficiency or complexity. In this activity we will be looking at cells that are as simple as a one-room efficiency apartment or as complex as a mansion.

## Model 1 – Three Types of Bacterial Cells

2. What is represented by the small dots found in each of the bacteria cells?  
**Ribosomes**
3. What is the name of the outermost layer that forms a boundary around the outside of each cell?  
**Cell wall**
4. How is the DNA described and what does this mean?

The DNA is described as free-floating. This means the DNA is not contained somewhere in the cell.

*Prokaryotology* Sorin Sonea, Léo G. Mathieu, 2000. Prokaryotes are profoundly original, highly efficient microorganisms that have played a decisive role in the evolution of life on Earth. Although disjunct, taken together, their cells form one global superorganism or biological system. One of the results of their non-Darwinian evolution has been the development of enormous diversity and bioenergetic variety. Prokaryotic cells possess standardized mechanisms for easy gene exchanges, lateral gene transfer, and they can behave like receiving and broadcasting stations for genetic material. Ultimately, the result is a global communication system based on the prokaryotic hereditary patrimony, by analogy, a two-billion-year-old world-wide web for their benefit. Eukaryotes have evolved from the association of at least three complementary prokaryotic cells, and their subsequent development has been enriched and accelerated by symbioses with other prokaryotes. One of these symbioses was responsible for the origin of vascular plants, which transformed vast sections of the continental surface of the Earth from deserts to areas with luxuriant life supporting vegetation. All forms of life on our planet are directly or indirectly sustained and enriched by the positive contribution of prokaryotes. Sorin Sonea and Léo G. Mathieu have been professors at the Department of Microbiology and Immunology, Faculty of Medicine at the Université de Montréal. They have long been advocates of the ideas presented in this book.
