Nafta, 1999 **Evolutionary Computation** Gai-Ge Wang, Amir H. Alavi, 2019-11-28 Computational intelligence is a general term for a class of algorithms designed by nature's wisdom and human intelligence. Computer scientists have proposed many computational intelligence algorithms with heuristic features. These algorithms either mimic the evolutionary processes of the biological world, mimic the physiological structure and bodily functions of the organism, imitate the behavior of the animal's group, mimic the characteristics of human thought, language, and memory processes, or mimic the physical phenomena of nature, hoping to simulate the wisdom of nature and humanity, enabling an optimal solution to the problem and solving an acceptable solution in an acceptable time. Computational intelligent algorithms have received extensive attention at home and abroad and have become an important research direction of artificial intelligence and computer science. This book will introduce the application of intelligent optimization algorithms in detail from the aspects of computational intelligence, job shop scheduling problems, multi-objective optimization problems, and machine learning. **Encyclopedia of Mathematical Geosciences** B. Over 300 international scientists, each expert in their specialties, have written around 350 separate articles on different topics of mathematical geosciences, including contributions on Artificial Intelligence, Big Data, Compositional Data Analysis, Geomathematics, Geostatistics, Geographical Information Science, Mathematical Morphology, Mathematical Petrology, Multifractals, Multiple Point Statistics, Spatial Data Science, Spatial Statistics, and Stochastic Process Modeling. Each topic incorporates cross-referencing to related articles and also has its own reference list to lead the reader to essential articles within the published literature. The entries are arranged alphabetically for easy access, and the subject and author indices are comprehensive and extensive. Shale Shaker, 1997 **Earth Science Software Directory** Betty L. Gibbs, 1993-03 This is the most comprehensive listing of commercial earth science mining-related software available. The format includes the name, address of the vendor, short software description, hardware requirements, price. Approximately 36 categories of software are covered, related to mining, geology, geophysics, economics, hydrology, environmental, mineral processing, geographic information systems, and more. The listings cover programs written for all types of computers, from PCs to mainframes. The DIRECTORY is indexed by program name, by vendor, by key words. A companion volume is titled PUBLIC DOMAIN SOFTWARE FOR EARTH SCIENTISTS, which contains information primarily on public domain software, inexpensive, less than 500 commercial packages. Software information has been collected from government agencies, universities, individuals. A VARIOGRAM PRIMER is one of a series of how-to books for analyzing earth science data.
