

Lesson 11: Properties of Tangents

Student Outcomes

- Students demonstrate that a tangent to a circle at a given point P is perpendicular to the radius drawn to that point.
- Students understand tangents to a circle through a point P outside.
- Students prove that tangent segments from the same point are congruent lengths.

Lesson Overview

Pages 1–3 begin the study of tangents to a circle. Lesson 11 is the concluding lesson and requires several components to fully understand tangents. The study of tangents continues in Lesson 12 and 13.

During the lesson, model the following definitions thoroughly.

Intersection of a circle: The intersection of a circle with another (straight) circle is the point of tangency to the circle where they meet. (See the picture.)

A point on the intersection circle is said to be inside the circle, and all the points of the circle with its center.

Radius or radius: The distance of a circle with center O and radius r is the length of a line segment from the center O to a point on the circle.

A point outside a circle is said to be outside the circle.

Classroom

Opening (20 minutes)

- Give a circle to each student.
- Students draw a circle tangent line.

Have students draw themselves and for the circle.

- Letting each student draw the diagram of the circle.
