

### Worked example (1): Propped cantilever beam with a uniform load.

A propped cantilever beam AB of a length  $L$  supports a uniform load of intensity  $w$ . Analyze this beam by solving the second-order differential equation of the deflection curve (the bending moment equation,  $EIy'' = M$ ).

Determine the reactions, shear forces, bending moments, slopes, and the deflections of the beam.

There two equilibrium equations (force equilibrium in vertical direction, and moment equilibrium) but three unknown reactions.

It is a problem of static indeterminacy of the first degree and has one redundant reaction.

**Behaviour and Design of Steel Structures to BS 5950** Mark A Bradford, David Nethercot, Nick Trahair, 2002-12-24 The third edition of this successful textbook is concerned specifically with the design of steel structures to the British Standard BS 5950 Thoroughly revised and updated in accordance with the latest 2000 amendment to Part 1 of the standard it discusses all aspects of the behaviour of steel structures and criteria used in their design With copious worked examples The Behaviour and Design of Steel Structures to BS 5950 is an ideal course textbook for senior undergraduate students and will also provide a useful reference source for the practising engineer

*Mechanics Of Solids And Structures (2nd Edition)* David W A Rees, 2016-08-04 The fifteen chapters of this book are arranged in a logical progression The text begins with the more fundamental material on stress and strain transformations with elasticity theory for plane and axially symmetric bodies followed by a full treatment of the theories of bending and torsion Coverage of moment distribution shear flow struts and energy methods precede a chapter on finite elements Thereafter the book presents yield and strength criteria plasticity collapse creep visco elasticity fatigue and fracture mechanics Appended is material on the properties of areas matrices and stress concentrations Each topic is illustrated by worked examples and supported by numerous exercises drawn from the author's teaching experience and

professional institution examinations CEI This edition includes new material and an extended exercise section for each of the fifteen chapters as well as three appendices The broad text ensures its suitability for undergraduate and postgraduate courses in which the mechanics of solids and structures form a part including mechanical aeronautical civil design and materials engineering      *Structural Masonry Designers' Manual* W. G. Curtin, Gerry Shaw, J. K. Beck, W. A. Bray, David Easterbrook, 2006-07-12 This major handbook covers the structural use of brick and blockwork A major feature is a series of step by step design examples of typical elements and buildings The book has been revised to include updates to the code of practice BS 5628 2000 2 and the 2004 version of Part A of the Building Regulations New information on sustainability issues innovation in masonry health and safety issues and technical developments has been added      **Behaviour and Design of Steel Structures to AS4100** Nick Trahair, Mark A Bradford, 2017-12-21 The behaviour of steel structures and the criteria used in their design are set out in detail in this book The book bridges the gap between the methods of analysis and the sizing of structural components The basis of the limit state design criteria of the latest Australian code for structural steel are explained and the reader is pointed to the relevant provisions of the code      **Materials and Structures R.** Whitlow, 2014-06-03 The second edition of this highly informative book retains much original material covering the principles of structural mechanics and the strength of materials together with the underlying concepts requisite to the theory of structure and structural design Some of the material involving lengthy hand drawing or hand calculation has been replaced with more up to date relevant material and frequent reference is made to computer aided learning techniques      The Behaviour and Design of Steel Structures to EC3 N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2017-12-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the forth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries      *Imperfect Bifurcation in Structures and Materials* Kiyohiro Ikeda, Kazuo Murota, 2019-09-25 Most physical systems lose or gain stability through bifurcation behavior This book explains a series of experimentally found bifurcation phenomena by means of the methods of static bifurcation theory      Engineering Design Applications II Andreas Öchsner, Holm Altenbach, 2019-06-27 This book offers an update on recent developments in modern engineering design Different engineering disciplines such as mechanical materials computer and process

engineering provide the foundation for the design and development of improved structures materials and processes The modern design cycle is characterized by the interaction between various disciplines and a strong shift to computer based approaches where only a few experiments are conducted for verification purposes A major driver for this development is the increased demand for cost reduction which is also linked to environmental demands In the transportation industry e g automotive or aerospace the demand for higher fuel efficiency is related to reduced operational costs and less environmental damage One way to fulfil such requirements is lighter structures and or improved processes for energy conversion Another emerging area is the interaction of classical engineering with the health and medical sector
