Intelligence Trends in Intelligent Systems Radek Silhavy,Roman Senkerik,Zuzana Kominkova Oplatkova,Zdenka Prokopova,Petr Silhavy,2017-04-06 This book presents new methods and approaches to real world problems as well as exploratory research that describes novel artificial intelligence applications including deep learning neural networks and hybrid algorithms This book constitutes the refereed proceedings of the Artificial Intelligence Trends in Intelligent Systems Section of the 6th Computer Science On line Conference 2017 CSOC 2017 held in April 2017 **Advances in Air Navigation Services** Tone Magister,2012-08-01 Provision of air navigation services entered a new era of performance scheme The performance scheme provides binding targets on four key performance areas of safety capacity environment and cost efficiency It is imposed that targets are fully achieved but it is not prescribed how this being typical for the performance based and goal oriented regulation Those key performance areas are interlaced by proportional and inversely proportional interdependencies Namely for example and simplified into one sentence if one aims to increase sector capacity with existing human resources constant staff costs and not investing into the technology constant support cost to achieve improved cost efficiency of service provision the resulting overloaded system might unlock the Pandora box of latent safety issues Since failure is not an option we the general migrating and traveling public airspace users airport operators air navigation services providers and the economy will gain attaining the goals of performance scheme in the process However un answered cardinal question is what is the winning strategy This book provides do not forget peculiarities insight into the elements of new business model of air navigation services provision as evolution of the latter became essential *Competition Law in Times of Crisis* Conor Talbot,2018-12-11 This book examines the role and utility of competition law within the EU s legislative and regulatory dialogue using its response to crisis conditions as a test of its aims and abilities As such its main conclusion is that competition policy acts as a forum for debate as to the direction of the European integration project while competition law can serve as a tool for aiding in the implementation of broader policy objectives The analysis here explores the role of the general economic context in the application of competition law the existence of identifiable baselines applicable in crisis conditions the ability and role of national competition authorities in applying competition law and the ways in which the European Commission s overarching policy goals can influence the application of competition law The decision to take an empirical approach to this research project stems from a conviction that an investigation into the real world situations faced by firms and consumers should underpin the evaluation of the applicable legal rules Over the past number of years the Commission has exerted more and more influence over the development of the regional and global airline industry and this book identifies the emergence of an apparent overarching aim on the part of the Commission to create a market with a handful of ultra competitive airlines with international reach serviced by an array of smaller feeder airlines on a regional basis The study of Irish beef processing on the other hand identifies a high level of government involvement in providing the strategic thinking behind a crisis cartel scheme and then demonstrates how the economic context exerted considerably more

pressure on the government and the national court than on the competition authorities involved Disruption Recovery in Air Traffic Prabhu Manyem,2021-05-06 Disruptions to commercial airline schedules are frequent and can inflict significant costs This is the first book to treat the optimisation of disruption management irregular operations in air traffic from a common good perspective that addresses the concerns of airlines airports air traffic service providers and most importantly of all the travelling public It describes a number of disruption management systems which are already in place at air traffic service ATC providers such as Airservices Australia As such the book will be of immense value to ATC providers and will serve as a reference point for planners at airline operations centres who control movements within a 48 hour window The optimisation techniques described here will also be very useful to academics and postgraduate students in civil aviation and operations research
