

Project Management

Organizations either large or small sometime throughout the history of operation have some form of project in which is conducted. Projects are performed to achieve the organizations short or long-term goals. If projects are developed and implemented properly, few problems will arise and the project will be a success. Throughout the lifecycle of the project the phases include conceptualization, feasibility, preliminary planning, detail planning, execution, and testing and commissioning. Between each of the phases organizations use checklists to ensure aspects of the project are recognized and can determine whether there is a continuance of the project or not. Project management aids in accomplishing the tasks associated with projects and helps ensure projects are completed within the costs, time, and performance. Project management also reduces the risk of a projects denial by thoroughly examining all aspects.

Defining Project

A definition of a project entails consideration to several sequences of actions and responsibilities that have detailed tangibility with completion to clear stipulations, outlining commence and wrap up times, financial boundaries, consumption of a populace or thing, and has several uses. Organizations perform tasks associated with projects to meet the requirements or needs of the organizations goals or tactics. However, projects may not always be a project, especially if the "projects" do not include a financial plan, expected completion times, or goals. Many projects an organization can acquire at one particular time can create problems such as postponements on one project that could postpone another or wasteful worth of the organizations resources creating an up and down effect. To eliminate some or most of the problems in relation to projects, organizations incorporate project management. Through project selection, organizations can choose projects in association to what the organization wants to attain.
