## **Project Report About Development Of Bluetooth Technology:**

Technology and Human Development Ilse Oosterlaken, 2015-05-15 This book introduces the capability approach in which wellbeing agency and justice are the core values as a powerful normative lens to examine technology and its role in development This approach attaches central moral importance to individual human capabilities understood as effective opportunities people have to lead the kind of lives they have reason to value The book examines the strengths limitations and versatility of the capability approach when applied to technology and shows the need to supplement it with other approaches in order to deal with the challenges that technology raises The first chapter places the capability approach within the context of broader debates about technology and human development discussing amongst others the appropriate technology movement The middle part then draws on philosophy and ethics of technology in order to deepen our understanding of the relation between technical artefacts and human capabilities arguing that we must simultaneously zoom in on the details of technological design and zoom out to see the broader socio technical embedding of a technology The book examines whether technology is merely a neutral instrument that expands what people can do and be in life or whether technology transfers may also impose certain views of what it means to lead a good life The final chapter examines the capability approach in relation to contemporary debates about ICT for Development ICT4D as the technology domain where the approach has been most extensively applied so far This book is an invaluable read for students in Development Studies and STS as well as policy makers practitioners and engineers looking for an accessible overview of technology and development from the perspective of the capability approach
