PROJECTILE MOTION

Projectile Motion

The diagram illustrates a projectile launched from a cannon. The path is a parabola labeled 'trajectory'. The object is labeled 'projectile'. A note states 'no air resistance'. The acceleration due to gravity is given as $g = 9.8 \text{ m/s}^2$ pointing downwards. A vertical dashed line shows the object's path if it were dropped straight down.

- Projectile motion is the motion of an object while it's only being affected by gravity and no other forces. An object is only in projectile motion while in the air, not when it's touching the ground or other objects.
- Also referred to as "free fall" (although "free fall" may only refer to 1D projectile motion).
- The vertical acceleration is the acceleration due to gravity, $g = 9.8 \text{ m/s}^2$, which always acts downwards.
- There is no horizontal acceleration so the horizontal velocity is constant.
- The object in projectile motion is called a **projectile** and the path is called the **trajectory**.

Initial Velocity Vector

The diagram shows the decomposition of an initial velocity vector v_i into horizontal (v_x) and vertical (v_y) components. It illustrates three cases:

- Horizontal launch: $v_y = 0 \text{ m/s}$, $v_x = v_i$
- Vertical launch: $v_x = 0 \text{ m/s}$, $v_y = v_i$
- Angled launch: $v_x = v_i \cos(\theta)$, $v_y = v_i \sin(\theta)$
