National Association of Broadcasters Engineering Handbook Garrison Cavell, 2017-07-28 The NAB Engineering Handbook is the definitive resource for broadcast engineers. It provides in-depth information about each aspect of the broadcast chain from audio and video contribution through an entire broadcast facility all the way to the antenna. New topics include Ultra High Definition Television, Internet Radio, Interfacing and Streaming, ATSC 3.0, Digital Audio Compression Techniques, Digital Television Audio Loudness Management, and Video Format and Standards Conversion. Important updates have been made to incumbent topics such as AM Shortwave FM and Television Transmitting Systems, Studio Lighting, Cameras, and Principles of Acoustics. The big picture comprehensive nature of the NAB Engineering Handbook will appeal to all broadcast engineers, everyone from broadcast chief engineers who need expanded knowledge of all the specialized areas they encounter in the field to technologists in specialized fields like IT and RF who are interested in learning about unfamiliar topics. Chapters are written to be accessible and easy to understand by all levels of engineers and technicians. A wide range of related topics that engineers and technical managers need to understand are covered, including broadcast documentation, FCC practices, technical standards, security, safety, disaster planning, facility planning, project management, and engineering management.

Transdisciplinary Engineering: Crossing Boundaries M. Borsato, N. Wognum, M. Peruzzini, 2016-10-13 The Concurrent Engineering (CE) approach was developed in the 1980s based on the concept that different phases of a product life cycle should be conducted concurrently and initiated as early as possible within the Product Creation Process (PCP). CE concepts have matured and become the foundation of many new ideas, methodologies, initiatives, approaches, and tools. This book contains the proceedings from the 23rd ISPE Inc International Conference on Transdisciplinary Engineering formerly Concurrent Engineering, held in Curitiba, Parana, Brazil, in October 2016. The conference, entitled Transdisciplinary Engineering: Crossing Boundaries, provides an important forum for international scientific exchange on Concurrent Engineering and collaborative enterprises and attracts the participation of researchers, industry experts, and students as well as government representatives. The 108 peer-reviewed papers and keynote speech included here range from theoretical and conceptual to strongly pragmatic works, which are organized into 17 sections, including Concurrent Engineering and knowledge exchange, engineering for sustainability, multidisciplinary project management, collaborative design, and engineering optimization of engineering operations and data analytics, and multidisciplinary design optimization, among others. The book gives an overview of the latest research advancements and applications in the field and will be of interest to researchers, design practitioners, and educators.
