Jackman, 2015-09-30 Manual of Allergy and Clinical Immunology for Otolaryngologists presents the most up to date knowledge related to allergy and immunology directed towards the unique needs of otolaryngologists Many of the clinical conditions treated by otolaryngologists have an allergic or immunologic pathogenesis including sinusitis rhinitis and otitis and otolaryngologists are often required to use allergic methodology in treating these problems This book is a resource to which physicians can refer to help them manage allergic aspects of common ENT problems and their diagnosis and management Manual of Allergy and Clinical Immunology for Otolaryngologists begins with an introduction to the fundamental immunologic processes necessary to understand allergic mechanism and diseases and goes on to include food and drug allergies anaphylaxis immune deficiencies occupational allergic diseases and tumor immunology among other topics Otolaryngologists across all specialties as well as residents will benefit from the current information that focuses on the most important aspects of each topic in a concise easy to reference format **The Composition, Structure and Reactivity of Proteins** P. Alexander, R. J. Block, 2014-06-05 The Composition Structure and Reactivity of Proteins **Doubled Haploid Production in Crop Plants** M. Maluszynski, Kenneth Kasha, B.P. Forster, I. Szarejko, 2013-06-29 The production of doubled haploids has become a necessary tool in advanced plant breeding institutes and commercial companies for breeding many crop species However the development of new more efficient and cheaper large scale production protocols has meant that doubled haploids are also recently being applied in less advanced breeding programmes This Manual was prepared to stimulate the wider use of this technology for speeding and opening up new breeding possibilities for many crops including some woody tree species Since the construction of genetic maps using molecular markers requires the development of segregating doubled haploid

populations in numerous crop species we hope that this Manual will also help molecular biologists in establishing such mapping populations For many years both the Food and Agriculture Organization of the United Nations FAO and the International Atomic Energy Agency IAEA have supported and coordinated research that focuses on development of more efficient doubled haploid production methods and their applications in breeding of new varieties and basic research through their Plant Breeding and Genetics Section of the Joint FAO IAEA Division of Nuclear Techniques in Food and Agriculture The first FAO IAEA scientific network Coordinated Research Programme CRP dealing with doubled haploids was initiated by the Plant Breeding and Genetics Section in 1986
