[Making Geometry Come Alive](#) Alfred S. Posamentier,2000-07-22 Activities in Geometry is a set of versatile enrichment exercises that covers a very broad range of topics in geometry Euclidean post Euclidean and non Euclidean Several criteria have been used in developing the activities and in selecting the topics that are included All of them bear heavily and equally on our concerns for curriculum goals and classroom management Each activity is presented as a reproducible student investigation It is followed by guidelines and notes for the teacher Each activity is keyed to the National Council of Teachers of Mathematics NCTM Standards Revised This link to the NCTM standards allows teachers to facilitate linking classroom activities to specific state and school district content standards First and foremost the activities are meant to be motivational As much as possible we want this book to achieve the goal of being attractive to students and show them that there is much more to geometry than proving theorems To demonstrate this aspect of geometry it is necessary for the investigation to be quite different from what students encounter in their basal texts different in both substance and form Presenting activities on a regular basis gives the variety and change of pace needed to sustain interest in any subject

Hoffmann, Johannes Lenhard, Falk Seeger, 2005-12-06 The advancement of a scientific discipline depends not only on the big heroes of a discipline but also on a community's ability to reflect on what has been done in the past and what should be done in the future This volume combines perspectives on both It celebrates the merits of Michael Otte as one of the most important founding fathers of mathematics education by bringing together all the new and fascinating perspectives created through his career as a bridge builder in the field of interdisciplinary research and cooperation The perspectives elaborated here are for the greatest part motivated by the impressing variety of Otte's thoughts however the idea is not to look back but to find out where the research agenda might lead us in the future This volume provides new sources of knowledge based on Michael Otte's fundamental insight that understanding the problems of mathematics education how to teach how to learn how to communicate how to do and how to represent mathematics depends on means mainly philosophical and semiotic that have to be created first of all and to be reflected from the perspectives of a multitude of diverse disciplines Learning Activities from the History of Mathematics Frank J. D. Rivera, 2015-06-17 This is a methods book for preservice middle level majors and beginning middle school teachers It takes a very practical approach to learning to teach middle school mathematics in an emerging Age of the Common Core State Standards The Common Core State Standards in Mathematics CCSSM is not meant to be the official mathematics curriculum it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace A

quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the Grade 5 through Grade 8 and traditional pathway Algebra I portions of the CCSSM first with issues in content practice assessment learning teaching and classroom management pursued next and in that order In this book we explore what it means to teach to the CCSSM within an alignment mindset involving content practice learning teaching and assessment The Common Core state content standards which pertain to mathematical knowledge skills and applications have been carefully crafted so that they are teachable learnable coherent fewer clearer and higher The practice standards which refer to institutionally valued mathematical actions processes and habits have been conceptualized in ways that will hopefully encourage all middle school students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation Thus in the CCSSM proficiency in content alone is not sufficient and so does practice without content which is limited Content and practice are both equally important and thus must come together in teaching learning and assessment in order to support authentic mathematical understanding This blended multisourced text is a getting smart book It prepares preservice middle level majors and beginning middle school teachers to work within the realities of accountable pedagogy and to develop a proactive disposition that is capable of supporting all middle school students in order for them to experience growth in mathematical understanding that is necessary for high school and beyond including future careers
