

QA Interview Questions And Answers 2013

Q1. What is difference between QA, QC and Software Testing?

Quality Assurance (QA): QA refers to the planned and systematic way of monitoring the quality of process which is followed to produce a quality product. QA tracks the outcomes and adjusts the process to meet the expectation.

Quality Control (QC): Concern with the quality of the product. QC finds the defects and suggests improvements. The process set by QA is implemented by QC. The QC is the responsibility of the tester.

Software Testing: is the process of ensuring that product which is developed by the developer meets the user requirement. The motive to perform testing is to find the bugs and make sure that they get fixed.

Q2. When to start QA in a project?

A good time to start the QA is from the beginning of the project startup. This will lead to plan the process which will make sure that product coming out meets the customer quality expectation. QA also plays a major role in the communication between teams. It gives time to step up the testing environment. The testing phase starts after the test plans are written, reviewed and approved.

Q3. What are verification and validation and difference between these two?

Verification: process of evaluating steps which is followed up to development phase to determine whether they meet the specified requirements for that stage.

Validation: process of evaluating product during or at the end of the development process to determine whether product meets specified requirements.

Difference between Verification and Validation:

- Verification is Static Testing where as Validations is Dynamic Testing.
- Verification takes place before validation.
- Verification evaluates plans, documents, requirements and specifications, where as Validation evaluates product.
- Verification inputs are checklist, issues list, walkthroughs and inspection, where as in Validation testing of actual product.
- Verification output is set of documents, plans, specifications and requirement documents where as in Validation actual product is output.
