Concepts:

- Chemical bonding
- Covalent bonding
- Ionic bonding
- Metallic bonding
- Intermolecular bonding
- Physical & chemical properties
- Electronegativity

Introduction

- Types of atoms are not equal in chemical bonds: **electronegativity**
- In order to understand how all substances behave we need to know how they are bonded, strong
- In order to know a substance behaves like ionic, strong, must be able to separate its ions completely

Electronegativity

- Electronegativity: tendency of an atom to attract electrons towards itself in a covalent compound
- More electronegative atoms are more likely to attract electrons in a bond, pulling them towards itself more
- Electronegativity values are arranged in a table
- From electronegativity values, we can predict the type of bond that will form between two atoms

Chemical bonding

How atoms combine to form molecules, including their types of bonding, how they behave, chemical bonds.

Electronegativity is a group of atoms that together are electronegative.

Electronegativity is a measure of the ability of an atom to attract electrons towards itself in a covalent bond. It is a relative property, and the values are arranged in a table.

Chemical Pedagogy Keith S Taber, 2024-12-20 How should chemistry be taught in schools colleges and universities Chemical Pedagogy discusses teaching approaches and techniques the reasoning behind them and the evidence for their effectiveness The book surveys a wide range of different pedagogic strategies and tactics that have been recommended to better engage learners and provide more effective chemistry teaching These accounts are supported by an initial introduction to some key ideas and debates about pedagogy the science of teaching Chemical Pedagogy discusses how teaching innovations can be tested to inform research based

practice Through this book the author explores the challenges of carrying out valid experimental studies in education and the impediments to generalising study results to diverse teaching and learning contexts As a result the author highlights both the need to read published studies critically and the value of teachers and lecturers testing out recommended innovations in their own classrooms Chemical Pedagogy introduces core principles from research into human cognition and learning to provide a theoretical perspective on how to best teach for engagement and understanding An examination of some of the more contentious debates about pedagogy leads to the advice to seek optimally guided instruction which balances the challenge offered to learners with the level of support provided This provides a framework for discussing a wide range of teaching approaches and techniques that have been recommended to those teaching chemistry across educational levels including both those intended to replace teaching from the front and others that can be built into traditional lecture courses to enhance the learning experience

Coteaching chemical bonding with Upper secondary senior students Felix Schultze, 2018-11-21 The aim of this study was to investigate how an experienced chemistry teacher gains and refines her pedagogical content knowledge PCK by cooperating with two grade 12 students age 18 as coteachers while teaching chemical bonding in a grade 10 Upper secondary class The study has been conducted from a sociocultural perspective especially Vygotsky's zone of proximal development ZPD Vygotsky 1978 Other theoretical concepts and models that have framed this study are Shulman's Pedagogical content knowledge PCK and Pedagogical reasoning and action model Shulman 1986 1987 When analysing the data Magnusson Krajcik and Borko's 1999 model of PCK and the 2017 Refined consensus model of PCK Carlson Daehler et al in press was used Empirical data was collected by video and audio recorded lessons coreflection sessions coplanning sessions and interviews During 10 weeks about 28 hours of video and audio recordings was collected Selected parts of the material were transcribed and analysed in order to answer two questions 1 How can chemistry teachers refine their PCK when coteaching together with senior students in an Upper secondary science class 2 How do Upper secondary senior student coteachers conceptual knowledge of representations and chemical bonding shape a teacher's foundation of personal PCK pPCK when teaching chemical bonding in an Upper secondary science class The results relating to research question one indicates that the coteachers contributed with their own learning experiences to help the teacher understand how students perceive difficult concepts The coteachers were mediating between the teacher and the students thus bridging the gap between the teacher and the students frames of references The experienced chemistry teacher improved her understanding of students thinking about themselves as learners of chemical bonding Regarding the second research question the findings showed that the creative process of reconstructing concepts of chemical bonding in the coplanning sessions meant that these were a useful tool for developing new teaching strategies and to further develop representations such as drama to illustrate chemical bonding Together the teacher and student coteachers constructed a new representation that better illustrated polar covalent bonding Taken together these results provide important insights

into how the chemistry teacher's pPCK was refined and how the coteachers contributed to improve instructional strategies

Overcoming Students' Misconceptions in Science Mageswary Karpudewan, Ahmad Nurulazam Md Zain, A.L. Chandrasegaran, 2017-02-28 This book discusses the importance of identifying and addressing misconceptions for the successful teaching and learning of science across all levels of science education from elementary school to high school. It suggests teaching approaches based on research data to address students' common misconceptions. Detailed descriptions of how these instructional approaches can be incorporated into teaching and learning science are also included. The science education literature extensively documents the findings of studies about students' misconceptions or alternative conceptions about various science concepts. Furthermore, some of the studies involve systematic approaches to not only creating but also implementing instructional programs to reduce the incidence of these misconceptions among high school science students. These studies, however, are largely unavailable to classroom practitioners partly because they are usually found in various science education journals that teachers have no time to refer to or are not readily available to them. In response, this book offers an essential and easily accessible guide.
