CHAPTER 5

TEACHING NOTES

Chapter 5 is short, but it is conceptually more difficult than the earlier chapters, primarily because it requires some knowledge of asymptotic properties of estimators. In class, I give a brief, heuristic description of consistency and asymptotic normality before stating the consistency and asymptotic normality of OLS. (Conveniently, the same assumptions that work for finite sample analysis work for asymptotic analysis.) More advanced students can follow the proof of consistency of the slope coefficient in the bivariate regression case. Section E.4 contains a full matrix treatment of asymptotic analysis appropriate for a master's level course.

An explicit illustration of what happens to standard errors as the sample size grows emphasizes the importance of having a larger sample. I do not usually cover the *LM* statistic in a first-semester course, and I only briefly mention the asymptotic efficiency result. Without full use of matrix algebra combined with limit theorems for vectors and matrices, it is difficult to prove asymptotic efficiency of OLS.

I think the conclusions of this chapter are important for students to know, even though they may not fully grasp the details. On exams I usually include true-false type questions, with explanation, to test the students' understanding of asymptotics. [For example: "In large samples we do not have to worry about omitted variable bias." (False). Or "Even if the error term is not normally distributed, in large samples we can still compute approximately valid confidence intervals under the Gauss-Markov assumptions." (True).]

For the empirical exercises, some SAS programs are provided to replicate the results. Most graphs are plotted using EViews. Some of the problems and solutions are obtained from *Econometric Theory* (ET) and these are reprinted with the permission of Cambridge University Press. I would like to thank Peter C. B. Phillips and the editors of the Problems and Solutions section, Alberto Holly and Juan Dolado, for this useful service to the econometrics profession. I would also like to thank my colleague James M. Griffin for providing many empirical problems and data sets. I have also used three empirical data sets from Lott and Ray (1992). The reader is encouraged to apply these econometric techniques to their own data sets and to replicate the results of published articles. Some journals' authors provide data sets upon request or are readily available on the web. Other empirical examples are given in Lott and Ray (1992) and Berndt (1991). Finally, I would like to thank my students Wei Wen Xiong, Ming Jang, Weng and Kiseok Nam, who solved several of these exercises. Please report any errors, typos, or suggestions to Badi H.
