The Sport Scientist and load monitoring through EPTS in team sports José María Oliva Lozano, Vincenzo Rago, 2024-05-22 The evolution of load monitoring processes is advancing at a dizzying pace The evolution of sports as an industry has

conditioned training theories and has brought about a notable change in such fundamental aspects as load prescription. Thanks to EPTS and other technologies we increasingly know more about the athlete. Nor can we forget that this has led to the emergence of a scientific perspective within the coaching staff. In this way load monitoring gradually ceases to be a task of the physical trainer and becomes a task of the Sport Scientist. The future of this role within the coaching staff will probably be determined by the professionals' ability to improve the analysis of the response of each athlete to the training stimulus, both internally (internal load) and externally (external load), since the relationship between load, sports performance and injury prevention is very close. However, we cannot forget that technological advances and new load monitoring formats may appear. Undoubtedly one of the objectives of the sports industry will be to develop lighter, smaller and less invasive EPTS that can also be applied to different contexts. This proceedings are interdisciplinary studies on the concepts and methods of physiology, psychology, system engineering, computer science, environment science, management, education and other related disciplines. Researchers and professionals who study an interdisciplinary subject crossing above disciplines or researchers on MMESE subject will be mainly benefited from this proceedings. MMESE primarily focuses on the relationship between Man, Machine and Environment, studying the optimum combination of man-machine-environment systems. In this system, Man refers to working people as the subject in the workplace, e.g. operators, decision makers. Machine is the general name for any object controlled by Man, including tools, machinery, computers, systems and technologies. Environment describes the specific working conditions under which Man and Machine interact, e.g. temperature, noise, vibration, hazardous gases, etc. The three goals of optimization of the man-machine-environment systems are to ensure safety, efficiency and economy. The integrated and advanced science research topic Man Machine Environment System Engineering MMESE was first established in China by Professor Shengzhao Long in 1981 with direct support from one of the greatest modern Chinese scientists, Xuesen Qian. In a letter to Shengzhao Long from October 22nd 1993, Xuesen Qian wrote: "You have created a very important modern science and technology in China."

Rapid Modelling for Increasing Competitiveness Gerald Reiner, 2009-06-13 A Perspective on Two Decades of Rapid Modeling It is an honor for me to be asked to write a foreword to the Proceedings of the 1st Rapid Modeling Conference In 1987 when I coined the term Rapid Modeling to denote queueing modeling of manufacturing systems I never imagined that two decades later there would be an international conference devoted to this topic I am delighted to see that there will be around 40 presentations at the conference by leading researchers from around the world and about half of these presentations are represented by written papers published in this book I congratulate the conference organizers and program committee on the success of their efforts to hold the first ever conference on Rapid Modeling Attendees at this conference might find it interesting to learn about the history of the term Rapid Modeling in the context it is used here During the fall of 1986 I was invited to a meeting at the Headquarters of the
