Discrete Mathematics Alister Humphreys, 2003

Sets, Logic and Maths for Computing David Makinson, 2020-05-19

This easy to understand textbook introduces the mathematical language and problem solving tools essential to anyone wishing to enter the world of computer and information sciences. Specifically designed for the student who is intimidated by mathematics, the book offers a concise treatment in an engaging style. The thoroughly revised third edition features a new chapter on relevance sensitivity in logical reasoning and many additional explanations on points that students find puzzling, including the rationale for various shorthand ways of speaking and abuses of language that are convenient but can give rise to misunderstandings. Solutions are now also provided for all exercises. Topics and features presents an intuitive approach emphasizing how finite mathematics supplies a valuable language for thinking about computation, discusses sets and the mathematical objects built with them such as relations and functions as well as recursion and induction, introduces core topics of mathematics including combinatorics and finite probability along with the structures known as trees, examines propositional and quantificational logic, how to build complex proofs from simple ones and how to ensure relevance in logic, addresses questions that students find puzzling but may have difficulty articulating through entertaining conversations between Alice and the Mad Hatter, provides an extensive set of solved exercises throughout the text. This clearly written textbook offers invaluable guidance to students beginning an undergraduate degree in computer science. The coverage is also suitable for courses on formal methods offered to those studying mathematics, philosophy, linguistics, economics and political science. Assuming only minimal mathematical background, it is ideal for both the classroom and independent study.

Magnani, N.J. Nersessian, Claudio Pizzi, 2012-12-06 Information technology has been in recent years under increasing commercial pressure to provide devices and systems which help replace the human in his daily activity This pressure requires the use of logic as the underlying foundational workhorse of the area New logics were developed as the need arose and new foci and balance has evolved within logic itself One aspect of these new trends in logic is the rising importance of model based reasoning Logics have become more and more tailored to applications and their reasoning has become more and more application dependent In fact some years ago I myself coined the phrase direct deductive reasoning in application areas advocating the

methodology of model based reasoning in the strongest possible terms Certainly my discipline of Labelled Deductive Systems allows to bring pieces of the application areas as labels into the logic I therefore heartily welcome this important book to Volume 25 of the Applied Logic Series and see it as an important contribution in our overall coverage of applied logic
