Seismic Restraint Manual Smacna, 2008-03 The Seismic Design Handbook Farzad Naeim, 2001-03-31 The Seismic Design Handbook is a primary resource for both researchers and teachers in the field of earthquake resistant design. The first edition of this handbook was received with much enthusiasm. It is the de facto textbook for teaching seismic design principles at many major universities. In the United States, UC Berkeley, Stanford, UCLA, University of Southern California, SUNY Buffalo, the University of Illinois, Washington University, the University of Texas at Austin, Georgia Tech, Cornell, and the University of Michigan have adopted the text. Abroad, the Imperial College of London and the Israel Institute of Technology are among its adopters. This second edition contains up-to-date information on planning, analysis, and design of earthquake resistant building structures. Its intention is to provide engineers, architects, developers, and students of structural engineering and architecture with authoritative yet practical design information. It bridges the gap between advances in the theories and concepts of seismic design and their implementation in practice. This handbook has been endorsed by the International Conference of Building Officials. Audience: The Seismic Design Handbook is a must for practicing engineers, architects, building officials, developers, teachers, and students in the field of earthquake resistant building design. Its distinguished panel of contributors is made up of 22 experts from industry and universities recognized for their knowledge and extensive practical experience in their fields. *NEHRP Commentary on the Guidelines for the Seismic Rehabilitation of Buildings* Eugene Zeller, 2000-06 This document from the National Earthquake Hazards Reduction Program (NEHRP) was prepared for the Building Seismic Safety Council (BSSC) with funding from the Federal Emergency Management Agency (FEMA). It provides commentary on the NEHRP Guidelines for the Seismic Rehabilitation of Buildings. It contains systematic guidance enabling design professionals to formulate effective, reliable rehabilitation approaches that will limit the expected earthquake damage to a specified range for a specified level of ground shaking. This kind of guidance, applicable to all types of existing buildings in all parts of the country, has never existed before. This report presents observations and makes recommendations for the protection of equipment, many of which support essential functions. These observations are based on a walk-down inspection of Madigan Army Medical Center conducted in December 1996. Protecting critical equipment includes ensuring an adequate load path, providing adequate anchorage, and accommodating differential movement. Observations and recommendations are presented based on effective equipment protection seen at MAMC, anchorage problems seen at MAMC, and load path concerns for well-anchored equipment. Lastly, several references are listed with highlights on their significance to medical facilities. *NEHRP Guidelines for the Seismic*
