Rule-Governed Behavior Steven C. Hayes, 2012-12-06 Animal learning and human learning traditions have been distinguishable within psychology since the start of the discipline and are to this day The human learning wing was interested in the development of psychological functions in human organisms and proceeded directly to their examination The animal learning wing was not distinguished by a corresponding interest in animal behavior per se Rather the animal learners studied animal behavior in order to identify principles of behavior of relevance to humans as well as other organisms The two traditions in other words did not differ so much on goals as on strategies It is not by accident that so many

techniques of modern applied psychology have emerged from the animal laboratory. That was one of the ultimate purposes of this work from the very beginning. The envisioned extension to humans was not just technological; however, many animal researchers, B. F. Skinner most prominently among them, recognized that direct basic research with humans might ultimately be needed in certain areas but that it was wise first to build a strong foundation in the controlled environment of the animal laboratory. In a sense, animal learning was always in part a human research program in development. Information Circular, 1925. *A Computer Program to Rapidly Screen Explosion-proof Enclosures* Frank T. Polymer Blends and Alloys M.J. Folkes,P.S. Hope,2012-12-06 P S HOPE and M J FOLKES Mixing two or more polymers together to produce blends or alloys is a well established strategy for achieving a specified portfolio of physical proper ties without the need to synthesise specialised polymer systems The subject is vast and has been the focus of much work both theoretical and experimental Much of the earlier work in this field was necessarily empirical and many of the blends produced were of academic rather than commercial interest The manner in which two or more polymers are compounded together is of vital importance in controlling the properties of blends Moreover particularly through detailed rheological studies it is becoming apparent that processing can provide a wide range of blend microstructures In an extreme this is exemplified by the in situ formation of fibres resulting from the imposition of predetermined flow fields on blends when in the solution or melt state The microstructures produced in this case transform the blend into a true fibre composite this parallels earlier work on the deformation of metal alloys This type of processing structure property correlation opens up many new possibilities for innovative applications for example the production of stiff fibre composites and blends having anisotropic transport properties such as novel membranes This book serves a dual purpose *Scientific and Technical Aerospace Reports* ,1977
