Reinforcement

The term reinforce means to strengthen, and is used in psychology to refer to anything stimulus which strengthens or increases the probability of a specific response. For example, if you want your dog to sit on command, you may give him a treat every time he sits for you. The dog will eventually come to understand that sitting when told to will result in a treat. This treat is reinforcing because he likes it and will result in him sitting when instructed to do so.

This is a simple description of a reinforcer (Skinner, 1938), the treat, which increases the response, sitting. We all apply reinforcers everyday, most of the time without even realizing we are doing it. You may tell your child "good job" after he or she cleans their room; perhaps you tell your partner how good he or she look when they dress up; or maybe you got a raise at work after doing a great job on a project. All of these things increase the probability that the same response will be repeated.

There are four types of reinforcement: positive, negative, punishment, and extinction. We'll discuss each of these and give examples.

Positive Reinforcement. The examples above describe what is referred to as positive reinforcement. Think of it as adding something in order to increase a response. For example, adding a treat will increase the response of sitting; adding praise will increase the chances of your child cleaning his or her room. The most common types of positive reinforcement or praise and rewards, and most of us have experienced this as both the giver and receiver.

[An Odyssey Through the Brain, Behavior and the Mind](#) Case H.

Vanderwolf, 2013-03-14 Much of contemporary behavioral or cognitive neuroscience is concerned with discovering the neural basis of psychological processes such as attention, cognition, consciousness, perception, and memory. In sharp divergence from this field, *An Odyssey Through the Brain, Behavior and the Mind* can be regarded as an elaborate demonstration that the large-scale features of brain electrical activity are related to sensory and motor processes in various ways but are not organized in accordance with conventional psychological concepts. It is argued that much of the traditional lore concerning the mind is based on prescientific philosophical assumptions and has little relevance to brain function. The first ten chapters of *An Odyssey Through the Brain, Behavior and the Mind* give a personal account of how the various discoveries that gave rise to these views came to be made. This is followed by discussions of brain organization in relation to behavior, learning, and memory, sleep, and consciousness, and the general problem of the mind. **The Sustainability and Spread of**

Organizational Change David A. Buchanan, Louise Fitzgerald, Diane Ketley, 2006-12-05 This important book examines issues affecting the sustainability and spread of new working practices. The question of why good ideas do not spread, the best practices puzzle, has been widely recognized. But the improvement evaporation effect, where successful changes are discontinued, has attracted less attention. Keeping things the way they are has been seen as an organizational problem to be resolved, not a condition to be achieved. This is one of the first major studies of the sustainability of change, focusing on the example of the NHS by a unique team of health service and academic researchers. The findings may apply to a variety of other settings. The agenda set out in 2000 in The NHS Plan is perhaps the largest organization development programme ever undertaken in any sector anywhere. The NHS thus offers a valuable living laboratory for the study of change. This text shows

that sustainability and spread are influenced by a range of issues contextual managerial political individual and temporal Developing a processual perspective this fresh analysis considers policy implications and strategies for managing sustainability and spread This book will be essential reading for students managers and researchers concerned with the effective implementation of organizational change
