comprehensive information for closing material loops and reducing carbon impacts of site construction this ground breaking book is an essential resource for landscape architects and engineers to meet the environmental challenges of the 21st century It provides strategies tools and detailed information for the practice of climate positive design Reduced carbon resource efficient materials and material mixes are addressed for both standard and alternative materials including stone concrete asphalt pavement brick earth based materials wood biobased materials metals and plastics Construction considerations are discussed and illustrated and strategies to reduce environmental impacts are offered Emphasis is placed on durable resource efficient structures and reduced embodied carbon approaches for pavements porous pavements green roofs bioengineered embankments retaining walls freestanding walls decks and boardwalks and rails fences and screens Exemplary case studies from around the world are highlighted and key resources such as assessment tools information transparency tools and benchmarking measures are provided Responding to the need for landscape architecture to account for climate change resource consumption and habitat destruction this important book is key reading for both professionals and students alike

Antarctic Palaeoenvironments and Earth-Surface Processes M.J. Hambrey,P.F. Barker,P.J. Barrett,V. Bowman,B. Davies,J.L. Smellie,M. Tranter ,2013-12-05 The volume highlights developments in our understanding of the palaeogeographical palaeobiological palaeoclimatic and cryospheric evolution of Antarctica It focuses on the sedimentary record from the Devonian to the Quaternary Period It features tectonic evolution and stratigraphy as well as processes taking place adjacent to beneath and beyond the ice sheet margin including the continental shelf The contributions in this volume include several invited review papers as well as original research papers arising from the International Symposium on Antarctic Earth Sciences in Edinburgh in July 2011 These papers demonstrate a remarkable diversity of Earth science interests in the Antarctic Following international trends there is particular emphasis on the Cenozoic Era reflecting the increasing emphasis on the documentation and understanding of the past record of ice sheet fluctuations Furthermore Antarctic Earth history is providing us with important information about potential future trends as the impact of global warming is increasingly felt on the continent and its ocean

Planetary Astrobiology Victoria Meadows,Giada Arney,Britney Schmidt,David J. Des Marais,2020-07-07 Are we alone in the universe How did life arise on our planet How do we search for life beyond Earth

These profound questions excite and intrigue broad cross sections of science and society. Answering these questions is the province of the emerging strongly interdisciplinary field of astrobiology. Life is inextricably tied to the formation, chemistry, and evolution of its host world, and multidisciplinary studies of solar system worlds can provide key insights into processes that govern planetary habitability, informing the search for life in our solar system and beyond. Planetary Astrobiology brings together current knowledge across astronomy, biology, geology, physics, chemistry, and related fields, and considers the synergies between studies of solar systems and exoplanets to identify the path needed to advance the exploration of these profound questions. Planetary Astrobiology represents the combined efforts of more than seventy-five international experts consolidated into twenty chapters and provides an accessible interdisciplinary gateway for new students and seasoned researchers who wish to learn more about this expanding field. Readers are brought to the frontiers of knowledge in astrobiology via results from the exploration of our own solar system and exoplanetary systems. The overarching goal of Planetary Astrobiology is to enhance and broaden the development of an interdisciplinary approach across the astrobiology, planetary science, and exoplanet communities, enabling a new era of comparative planetology that encompasses conditions and processes for the emergence, evolution, and detection of life.

Quarterly Review, 1863 The Review of Reviews William Thomas Stead, 1892 *Applied Sedimentology* Richard C. Selley, 2000-05-24

There are three types of rock: igneous, metamorphic, and sedimentary. Sedimentary rocks form from the weathering, erosion, transportation, and deposition of older rocks. *Applied Sedimentology* describes the formation, transportation, and deposition of sediment and the post-depositional processes that change soft sediment into sedimentary rock. Sedimentary rocks include sandstones, limestones, and mudstones. All the world's coal, most of its water, and fossil fuels, and many mineral deposits occur in sedimentary rocks. *Applied Sedimentology* shows how the study of sediments aids the exploration for and exploitation of natural resources, including water, ores, and hydrocarbons. Completely revised edition. Like its precursor, it describes sediments from sand grains to sedimentary basins. Features up-to-date account and critique of sequence and cyclostratigraphy. Extensively illustrated with photos and remotely sensed sea-bed images describing sedimentary processes, products, and depositional systems. Color plates illustrate sediment textures, lithologies, pore types, diagenetic textures, and carbonate and clastic sequence stratigraphic models. Emphasises the applications of sedimentology to the exploration for and exploitation of natural resources, including water, ores, and hydrocarbons. Extensive references and up-to-date bibliography for further study.

The London Quarterly Review, 1863 **Thermochronological Methods**

Frank Lisker, Barbara Ventura, U. A. Glasmacher, 2009. Thermochronology: the use of temperature-sensitive radiometric dating methods to reconstruct the thermal histories of rocks has proved to be an important means of constraining a wide variety of geological processes. Fission track and U-Th-He analyses of apatites, zircons, and titanites are the best established methods for reconstructing such histories over time scales of millions to hundreds of millions of years. The papers published in this

volume are divided into two sections. The first section on New approaches in thermochronology presents the most recent advances of existing thermochronological methods and demonstrates the progress in the development of alternative thermochronometers and modelling techniques. The second section Applied thermochronology comprises original papers about denudation, long-term landscape evolution and detrital sources from the European Alps, northwestern Spain, the Ardennes, the Bohemian Massif, Fennoscandia and Corsica. It also includes case studies from the Siberian Altai, Mozambique, South Africa and Dronning Maud Land, East Antarctica, and reports an ancient thermal anomaly within a regional fault in Japan.
