Department of the Air Force, 2000 **I Like to Feed Dinosaurs!** Jeff Ashley, 2023-02-02 On a back road in Saranac Lake New York is Petrova Avenue where a small rock shop owned by the Bristol family was located As a young boy I remember going to that rock shop every summer when my family traveled to visit my grandparents in Lake Placid That rock shop had treasures lots of treasures There were fossils that were millions of years old and geodes that you could buy and have cut open The geodes were my favorite It would take half an hour to cut open those big round grapefruit sized rocks and when they split you could hear a thump inside the oil cutting saw tank Then they would open the saw lid and you would see what kind of treasure was inside the geode That was fifty years ago I can still see the sparkling light shining off the oil covered hollow inside and the purple crystals of amethyst that shined back The geodes with large dark purple amethyst crystals were the most valuable I still have those same geodes today Perhaps because of this experience my favorite color became purple and I went on to college and majored in geology How I wondered as a young boy could anyone be certain that those fossils were indeed millions of years old Geology teaches us that the world is 4 75 billion years old and that the Grand Canyon represents 1 8 billion years of earth s history with an average depth of over one mile in thickness six thousand feet According to <https://www.ocean.washington.edu> it also tells us that the average thickness of land on our planet is 2 755 feet and 75 percent of the surface rocks are sedimentary <https://digitalatlas.cose.isu.edu> Sedimentary rocks are rocks that have been broken down from other rocks by the action of water Where did all the water come from to create so many sedimentary rocks that are even found 2 755 feet above sea level Virtually all scientific sources agree that if all the ice on the planet melted North Pole South Pole glaciers etc the ocean would only rise 200 230 feet above sea level So where did all the water come from to make those sedimentary rocks that are over thousands of feet above sea level Science does not have an answer Did you know if you apply common rates of ocean sedimentation to how long it would take the sedimentary layers in the Grand Canyon to form it will only take 5 4 million years or less to form the sedimentary layers of the Grand Canyon instead of 1 800 million years There are very pronounced errors in the theory of evolution that can be proven with simple math and common sense explanations That is what this book is about common sense rebuttals of what has become a worldwide philosophy evolution There are simple answers to the questions of why the earth is not extremely old and where all the water came from

that formed sedimentary rocks at such high elevations above sea level These answers are not taught in our school classrooms In this book I attempt to write from a less complicated stance explaining in layman s terms truths that refute the theory of evolution New Publications of the Geological Survey Geological Survey (U.S.),1988 **Grand Canyon Nature Notes** United States. Miall,2015-12-28 A Comprehensive review of modern stratigraphic methods The stratigraphic record is the major repository of information about the geological history of Earth a record stretching back

for nearly 4 billion years Stratigraphic studies fill out our planet's plate tectonic history with the details of paleogeography past climates and the record of evolution and stratigraphy is at the heart of the effort to find and exploit fossil fuel resources Modern stratigraphic methods are now able to provide insights into past geological events and processes on time scales with unprecedented accuracy and precision and have added much to our understanding of global tectonic and climatic processes It has taken 200 years and a modern revolution to bring all the necessary developments together to create the modern dynamic science that this book sets out to describe Stratigraphy now consists of a suite of integrated concepts and methods several of which have considerable predictive and interpretive power The new integrated dynamic science that Stratigraphy has become is now inseparable from what were its component parts including sedimentology chronostratigraphy and the broader aspects of basin analysis Petroleum Abstracts.
