

What are neural networks

- Neural networks use many nodes (neurons) connected by edges (axons, dendrites) to transform an input into a desired output
- The neurons and their edges are adjusted, frequently using gradual changes to *train* the neural network.
- Neural networks can be trained many ways
 - Actor / Critic Learning
 - external reinforcement
 - Hebbian Learning (association)
 - Internal reinforcement
 - Linear Algebra (closed form solution)
- We tend to use gradient descent like learning to make incremental changes over time.
- We can introduce Boltzmann like mechanisms in some networks

Design Feed Forward Neural Networks for Solving Ordinary Initial Value Yassen Adel, Luma Naji, 2013 The aim of this B is to design fast thesisd forward neural networks to present a method to solve initial value problem for ordinary differential equations That is to develop an algorithm which can speedup the solution times reduce solver failures and increase possibility of obtaining the globally optimal solution The applicability of this approach ranges from single ordinary differential equations to systems of ordinary differential equations with initial condition Also a variant types of compute the search direction k of conjugate gradient training algorithm are introduced and we describing several different training algorithms many modified and new algorithms have been proposed for training Feed Forward Neural Network FFNN many of them having a very fast convergence rate for reasonable size networks In all of these algorithms we use the gradient of the performance function energy function to determine how to adjust the weights such that the performance function is minimized where the back propagation algorithm has been used to increase the speed of training Finally we illustrate the method by solving a variety of model problems

The Numerical Solution of Neural Network Training Problems S. Saarienen, R. Bramley, George Cybenko, 1991 The analysis and experimental results in this paper lead to the conclusion that many network training problems are ill conditioned and may not be solved more efficiently by higher order optimization methods While our analyses are for completely connected
