Chemical Engineering and Chemical Process Technology - Volume V Ryszard Pohorecki, John Bridgwater, M. Molzahn, Rafiqul Gani and Crispulo Gallegos, 2010-11-30 *Chemical Engineering and Chemical Process Technology* is a theme component of Encyclopedia of Chemical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS) which is an integrated compendium of twenty Encyclopedias. Chemical engineering is a branch of engineering dealing with processes in which materials undergo changes in their physical or chemical state. These changes may concern size, energy content, composition and/or other application properties. Chemical engineering deals with many processes belonging to chemical industry or related industries: petrochemical, metallurgical, food, pharmaceutical, fine chemicals, coatings and colors, renewable raw materials, biotechnological, etc. and finds application in manufacturing of such products as acids, alkalis, salts, fuels, fertilizers, crop protection agents, ceramics, glass, paper, colors, dyestuffs, plastics, cosmetics, vitamins and many others. It also plays a significant role in environmental protection, biotechnology, nanotechnology, energy production and sustainable economical development. The Theme on Chemical Engineering and Chemical Process Technology deals in five volumes and covers several topics such as: Fundamentals of Chemical Engineering, Unit Operations, Fluids, Unit Operations, Solids, Chemical Reaction Engineering, Process Development, Modeling, Optimization and Control, Process Management, The Future of Chemical Engineering, Chemical Engineering Education, Main Products which are then expanded into multiple subtopics each as a chapter. These five volumes are aimed at the following five major target audiences: University and College students, Educators, Professional practitioners, Research personnel and Policy analysts, managers and decision makers and NGOs.

The agricultural industry is primarily driven by the fast growth of the population and the subsequent need to supply sufficient food globally It is estimated that the global population will expand from 8 billion to about 9 billion in 2050 and crop production needs to double in order to supply enough food for all people by 2050 Moreover the climate change and the intensification of areas of infertile and unproductive soil create new and additional difficulties It is urgent and of utter importance to find alternative practices to the traditional ones based on the indiscriminate use of various synthetic chemicals e g fertilizers and pesticides which are mainly used nowadays to overcome current and future agricultural challenges in a natural more efficient and sustainable way Recent regulations EU 1009 2019 and Farm Bill in EU and USA respectively promote the adoption of biostimulants in agriculture and open the market for new and innovative solutions This regulation is a major step forward that should encourage the scientific community in strict interaction with the industry in the continuous development of new bio based solutions for modern agriculture
