Digital Logic Design B. Holdsworth, 2014-05-12 *Digital Logic Design Second Edition* provides a basic understanding of digital logic design with emphasis on the two alternative methods of design available to the digital engineer This book describes the digital design techniques which have become increasingly important Organized into 14 chapters this edition begins with an overview of the essential laws of Boolean algebra K map plotting techniques as well as the simplification of Boolean functions This text then presents the properties and develops the characteristic equations of a number of various types of flip flop Other chapters consider the design of synchronous and asynchronous counters using either discrete flip flops or shift registers This book discusses as well the design and implementation of event driven logic circuits using the NAND sequential equation The final chapter deals with simple coding techniques and the principles of error detection and correction This book is a valuable resource for undergraduate students digital engineers and scientists

Advanced Techniques for Embedded Systems Design and Test Juan C. López, Román Hermida, Walter Geisselhardt, 2013-03-09 As electronic technology reaches the point where complex systems can be integrated on a single chip and higher degrees of performance can be achieved at lower costs designers must devise new ways to undertake the

laborious task of coping with the numerous and non trivial problems that arise during the conception of such systems On the other hand shorter design cycles so that electronic products can fit into shrinking market windows put companies and consequently designers under pressure in a race to obtain reliable products in the minimum period of time New methodologies supported by automation and abstraction have appeared which have been crucial in making it possible for system designers to take over the traditional electronic design process and embedded systems is one of the fields that these methodologies are mainly targeting The inherent complexity of these systems with hardware and software components that usually execute concurrently and the very tight cost and performance constraints make them specially suitable to introduce higher levels of abstraction and automation so as to allow the designer to better tackle the many problems that appear during their design Advanced Techniques for Embedded Systems Design and Test is a comprehensive book presenting recent developments in methodologies and tools for the specification synthesis verification and test of embedded systems characterized by the use of high level languages as a road to productivity Each specific part of the design process from specification through to test is looked at with a constant emphasis on behavioral methodologies Advanced Techniques for Embedded Systems Design and Test is essential reading for all researchers in the design and test communities as well as system designers and CAD tools developers *Scientific and Technical Books and Serials in Print* ,1989 Books in Print ,1981 CIEP ... ,2000 *Books in Print Supplement* ,1994 **Fundamentals of Digital Electronics** Robert K. Dueck,1994 Digital Instrumentation and Control Systems in Nuclear Power Plants National Research Council,Division on Engineering and Physical Sciences,Commission on Engineering and Technical Systems,Committee on Application of Digital Instrumentation and Control Systems to Nuclear Power Plant Operations and Safety,1997-05-18 The nuclear industry and the U S Nuclear Regulatory Commission USNRC have been working for several years on the development of an adequate process to guide the replacement of aging analog monitoring and control instrumentation in nuclear power plants with modern digital instrumentation without introducing off setting safety problems This book identifies criteria for the USNRC s review and acceptance of digital applications in nuclear power plants It focuses on eight areas software quality assurance common mode software failure potential systems aspects of digital instrumentation and control technology human factors and human machine interfaces safety and reliability assessment methods dedication of commercial off the shelf hardware and software the case by case licensing process and the adequacy of technical infrastructure Digital Technologies and Instructional Design for Personalized Learning Zheng, Robert,2018-03-02 When facilitating high quality education using digital technology to personalize students learning is a focus in the development of instruction There is a need to unify the multifaceted directions in personalized learning by presenting a coherent and organized vision in the design of personalized learning using digital technology Digital Technologies and Instructional Design for Personalized Learning is a critical scholarly resource that highlights the theories principles and learning strategies in personalized learning with digital technology

Featuring coverage on a broad range of topics such as collaborative learning instructional design and computer supported collaborative learning this book is geared towards educators professionals school administrators academicians researchers and students seeking current research on the area of personalized learning with digital technology **The Philosopher's Stone for Sustainability** Yoshiki Shimomura, Koji Kimita, 2012-09-26 Industrial Product Service Systems IPS2 which is defined as an integrated industrial product and service offering that delivers value in use has expanded rapidly over the last decade IPS2 has allowed us to achieve both high added value and high productivity and has enriched our QOL by improving the performance of products and services We are now struggling with many awkward issues related to sustainability but IPS2 is expected to be the philosopher's stone for solving these issues Following the pattern of conferences held in Cranfield in 2009 Linköping in 2010 and Braunschweig in 2011 the fourth International CIRP Conference on Industrial Product Service Systems held on November 8-9 2012 in Tokyo will cover various aspects of IPS2 Topics planned for this year's conference reflect the latest IPS2 information in both the natural sciences and humanities and include case studies from various industries IPS2 is still a relatively new field so it is important to keep track of the entire context in order to promote more cross sectional cooperation between multimodal fields and disciplines The fourth International CIRP Conference on Industrial Product Service Systems will serve as a vital platform for such collaborations and the discussion of new scientific ideas

Methods and Tools for Effective Knowledge Life-Cycle-Management Alain Bernard, Serge Tichkiewitch, 2008-04-01 Knowledge Management is a wide critical and strategic issue for all the companies from the SMEs to the most complex organizations The key of competitiveness is knowledge because of the necessity of reactivity flexibility agility and innovation capacities Knowledge is difficult to measure itself but what is visible this is the way of improving products technologies and enterprise organizations During the last four years based on the experience of most of the best experts around the World CIRP The International Academy for Production Engineering has decided to prepare and structure a Network of Excellence NoE proposal The European Community accepted to found the VRL KCiP Virtual Research Laboratory Knowledge Community in Production As its name indicates it the aim of this NoE was really to build a Knowledge Community in Production This was possible and realistic because the partners were representative of the most important universities in Europe and also because of strong partnerships with laboratories far from Europe Japan Australia South Africa USA etc Based on such powerful partnership the main issue was to help European manufacturing industry to define and structure the strategic knowledge in order to face the strategic worldwide challenges Manufacturing in Europe currently has two essential aspects 1 It has to be knowledge intensive given the European demands for high tech products and services e.g. electronics medicines

Design of the In-vehicle Experience Christian Roth, 2022-06-09 The in-vehicle experience both physical and digital is increasingly the differentiating factor between vehicles Since touch displays smart surfaces and internet connectivity are present in most vehicle segments the growing resemblance of in-vehicle experiences with mobile experiences leads to user

expectations on par with smartphones While manufacturers are faced with providing suitable service offerings that are safe to use they must also identify services to exclude or limit without encouraging drivers to resort back to their mobile devices This increasingly complex in vehicle experience design process is being shaped by new stakeholders including operating system providers and application developers Design of the In vehicle Experience examines the challenging and changing relationships between manufacturers that lack in software development and mobile experience design skills and new stakeholders that lack the decades of experience designing for the driving context The report also discusses augmenting and expanding existing guidelines and best practices to address the challenges of modern in vehicle experience design Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2022012> **PC Mag** ,1984-07-10 PCMag.com is a leading authority on technology delivering Labs based independent reviews of the latest products and services Our expert industry analysis and practical solutions help you make better buying decisions and get more from technology **Handbook of Human-Machine Systems** Giancarlo Fortino,David Kaber,Andreas Nürnberger,David Mendonça,2023-07-25 Handbook of Human Machine Systems Insightful and cutting edge discussions of recent developments in human machine systems In Handbook of Human Machine Systems a team of distinguished researchers delivers a comprehensive exploration of human machine systems HMS research and development from a variety of illuminating perspectives The book offers a big picture look at state of the art research and technology in the area of HMS Contributing authors cover Brain Machine Interfaces and Systems including assistive technologies like devices used to improve locomotion They also discuss advances in the scientific and engineering foundations of Collaborative Intelligent Systems and Applications Companion technology which combines trans disciplinary research in fields like computer science AI and cognitive science is explored alongside the applications of human cognition in intelligent and artificially intelligent system designs human factors engineering and various aspects of interactive and wearable computers and systems The book also includes A thorough introduction to human machine systems via the use of emblematic use cases as well as discussions of potential future research challenges Comprehensive explorations of hybrid technologies which focus on transversal aspects of human machine systems Practical discussions of human machine cooperation principles and methods for the design and evaluation of a brain computer interface Perfect for academic and technical researchers with an interest in HMS Handbook of Human Machine Systems will also earn a place in the libraries of technical professionals practicing in areas including computer science artificial intelligence cognitive science engineering psychology and neurobiology *Handbook of Research on Developing Smart Cities Based on Digital Twins* Del Giudice, Matteo,Osello, Anna,2021-01-15 The advent of connected smart technologies for the built environment may promise a significant value that has to be reached to develop digital city models At the international level the role of digital twin is strictly related to massive amounts of data that need to be processed which proposes several challenges in terms of digital technologies capability computing interoperability
