

Lecture 9

Stability of Elastic Structures

Lecture 10

Advanced Topic in Column Buckling

Problem 9-1:

A clamped-free column is loaded at its tip by a load P . The issue here is to find the critical buckling load.

- Suggest a simple form of the buckled of the column, satisfying kinematic boundary conditions.
- Use the Rayleigh-Ritz quotient to find the approximate value of the buckling load.
- Come up with another buckling shape which would give you a lower value for the buckling load.
- Find the exact solution of the problem and show the convergence of the approximate solution to the exact solution.

Follow the example of a pin-pin column, which is presented in the notes of Lecture 9.

The Behaviour and Design of Steel Structures to EC3 N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2017-12-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the forth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries
