

3.4 Cycles of Matter

Lesson Objectives

-  Describe how matter cycles among the living and nonliving parts of an ecosystem.
-  Describe how water cycles through the biosphere.
-  Explain why nutrients are important in living systems.
-  Describe how the availability of nutrients affects the productivity of ecosystems.

Lesson Summary

Recycling in the Biosphere _____, unlike energy, is _____ within and between ecosystems. Elements pass from one organism to another and from one part of the biosphere to another through _____, which are closed loops powered by the flow of energy.

The Water Cycle Water moves between the _____, the _____, and _____.

- ▶ Evaporation is the process in which water changes from a liquid to a gas.
- ▶ Transpiration is the process in which water evaporates from the leaves of plants. Other steps in the water cycle include _____.

Nutrient Cycles The chemical substances that an organism needs to survive are called _____. Like water, nutrients pass through organisms and the environment.

- ▶ **Carbon Cycle:** Carbon is a key ingredient of all _____. Processes involved in the carbon cycle include photosynthesis and human activities such as burning.
- ▶ **Nitrogen Cycle:** Nitrogen is needed by all organisms to _____. Processes involved in the nitrogen cycle include _____ and _____.
 - In **nitrogen fixation**, certain _____ convert _____ into _____.
 - In **denitrification**, other soil _____ nitrogen compounds called _____ back into _____.
- ▶ **Phosphorus Cycle:** Phosphorus is needed for molecules such as _____ and _____. Most of the phosphorus in the biosphere is _____ and _____. Stored phosphorus is gradually released into water and soil, where it is used by organisms.

Nutrient Limitation A nutrient that, in short supply, can limit the productivity of an ecosystem is called a _____.

Chemistry in a Month John Wilkinson, 2003 *Gaia's Body* Tyler Volk, 2012-12-06 If the biosphere really is a single coherent system then it must have something like a physiology It must have systems and processes that perform living functions In *Gaia's Body* Tyler Volk describes the environment that enables the biosphere to exist various ways of looking at its anatomy and physiology the major biogeographical regions such as rainforests deserts and tundra the major substances the biosphere is made of and the chemical cycles that keep it in balance He then looks at the question of whether there are any long term trends in the earth's evolution and examines the role of humanity in *Gaia's* past and future Both adherents and sceptics have often been concerned that *Gaia* theory contains too much goddess and too few verifiable hypotheses This is the book that describes for scientists students and lay readers alike the theory's firm basis in science *Air Pollution Calculations* Daniel A. Vallero, 2023-09-17 *Air Pollution Calculations* Quantifying Pollutant Formation Transport Transformation Fate and Risks Second Edition enhances the systems science aspects of air pollution including transformation reactions in soil water sediment and biota that contribute to air pollution This second edition will be an update based on research and actions taken since 2019 that affect air pollution calculations including new control technologies emissions measurement and air quality modeling Recent court cases regulatory decisions and advances in technology are discussed and where necessary calculations have been revised to reflect these updates Sections discuss pollutant characterization pollutant transformation and environmental partitioning Air partitioning physical transport of air pollutants air pollution biogeochemistry and thermal reactions are also thoroughly explored The author then carefully examines air pollution risk calculations control technologies and dispersion models The text wraps with discussions of economics and project management reliability and failure and air pollution decision making Provides real life current cases as examples of quantitation of emerging air pollution problems Includes straightforward derivation of equations giving practitioners and instructors a direct link between first principles of science and applications of technologies Presents example calculations that make scientific theory real for the student and practitioner *Australian Soils and Landscapes* Neil N. McKenzie, David D. Jacquier, Ray R.F. Isbell, Katharine K. Brown, 2004-07 This essential reference provides an introduction to the remarkable soils and landscapes of Australia It reveals their great diversity and explains why an understanding of soil properties and landscape processes should guide our use of the land Using striking photographs of characteristic landscapes it begins by describing the basic properties of soils and how Australia's distinctive soils and landscapes have co evolved We gain a greater understanding of why particular soils occur at certain locations and how soil variation can influence landscape processes agricultural productivity and ecosystem function The book explains the impact of various forms of land use and the changes they can bring about in soil This is followed by an invaluable compendium that describes and illustrates over 100 of the more important and widespread soils of Australia along with their associated landscapes There is a brief account of each

soil s environment usage and qualities as well as details on chemical and physical properties so we can make more informed decisions about appropriate land use Australian Soils and Landscapes will be a valuable resource for farmers natural resource managers soil and environmental scientists students and anyone with an interest in Australia s unique environment

Following the Oil J. Faraja Kafela,2017-02 Following the Oil is about doing things God s way God is bringing the church to a place where we see the importance of following the oil according to the Word God s way is always for us to act on what we can do in the natural and He will accomplish in the supernatural what we cannot By following the guidance of the Holy Spirit and the oil of God s Word we too can encounter the miraculous promises God has bestowed to us as blessings for us to acquire and achieve

Life Cycles P. Calow,2012-12-06 As time progresses biology becomes more and more fragmented and specialized and it becomes increasingly difficult to see how all the disparate facts fit together It is completely proper that biologists should have sought to reduce complex biological wholes into their parts and it is natural that studies on the products of this reduction should have diverged from more holistic studies on evolution and ecology Yet the biological parts what they do and how they are organized are products of an evolutionary process which fits organisms for life in particular ecological circumstances Physiology developmental biology ecology and evolutionary biology must not be allowed to grow too far apart therefore because all these disciplines and the way their subject matters interact are crucial to understanding organisms and it is this it seems to me which is the fundamental goal of the biological sciences This book has been written in the spirit of unification and synthesis It is in a sense a general biology of the organism not however of organisms as static unchanging systems but of organisms as dynamic entities which progress through a definite cycle of events from birth to maturity The central theme therefore will be the life cycle and the book is organized around the three main phases which are characteristic of all life cycles growth Part II reproduction Part III and ageing Part IV
