Brandon Barker, Daniel J. Povinelli, 2021-12-07 The Aesop's Fable Paradigm is a collection of essays that explore the cutting edge intersection of Folklore and Science From moralizing fables to fantastic folktales humans have been telling stories about animals animals who can talk feel think and make moral judgments just as we do for a very long time In contrast scientific studies of the mental lives of animals have professed to be investigating the nature of animal minds slowly cautiously objectively with no room for fanciful tales fables or myths But recently these folkloric and scientific traditions have merged in an unexpected and shocking way scientists have attempted to prove that at least some animal fables are actually true These interdisciplinary chapters examine how science has targeted the well known Aesop's fable The Crow and the Pitcher as their starting point They explore the ever growing set of experimental studies which purport to prove that crows possess an understanding of higher order concepts like weight mass and even Archimedes insight about the physics of water displacement The Aesop's Fable Paradigm explores how these scientific studies are doomed to accomplish little more than to mirror anthropomorphic representations of animals in human folklore and reveal that the problem of folkloric projection extends far beyond the Aesop's Fable Paradigm into every nook and cranny of

Jakob von Uexküll and Philosophy Francesca Michelini, Kristian Köchy, 2019-12-09 Dismissed by some as the last of the anti-Darwinians his fame as a rigorous biologist even tainted by an alleged link to National Socialist ideology it is undeniable that Jakob von Uexküll 1864-1944 was eagerly read by many philosophers across the spectrum of philosophical schools from Scheler to Merleau-Ponty and Deleuze and from Heidegger to Blumenberg and Agamben What has then allowed his name to survive the misery of history as well as the usually fatal gap between science and humanities This collection of essays attempts for the first time to do justice to Uexküll's theoretical impact on Western culture By highlighting his importance for philosophy the book aims to contribute to the general interpretation of the relationship between biology and philosophy in the last century and explore

the often neglected connection between continental philosophy and the sciences of life Thanks to the exploration of Uexküll's conceptual legacy the origins of cybernetics the overcoming of metaphysical dualisms and a refined understanding of organisms appear variedly interconnected Uexküll's background and his relevance in current debates are thoroughly examined as to appeal to undergraduate and postgraduate students as well as postdoctoral researchers in fields such as history of the life sciences philosophy of biology critical animal studies philosophical anthropology biosemiotics and biopolitics

Combining Minds Luke Roelofs, 2019-01-28 *Combining Minds* is about the idea of minds built up out of other minds whether this is possible and what it would mean if it were Roelofs surveys many areas of philosophy and psychology analysing and evaluating denials and affirmations of mental combination that have been made in regard to everything from brain structure to psychological conflict to social cooperation In each case he carefully distinguishes

different senses in which subjectivity might be composite and different arguments for and against them concluding that composite subjectivity in various forms may be much more common than we think *Combining Minds* is also the first book length defence of constitutive panpsychism against all aspects of the combination problem Constitutive panpsychism is an increasingly prominent theory holding that consciousness is naturally inherent in matter with human consciousness built up out of this basic consciousness the same way human bodies are built up out of physical matter Such a view requires that many very simple conscious minds can compose a single very complex one and a major objection made against constitutive panpsychism is that they cannot that minds simply do not combine This is the combination problem which Roelofs scrutinizes dissects and refutes It reflects not only contemporary debates but a long philosophical tradition of contrasting the apparently indivisible unity of the mind with the deep and pervasive divisibility of the material world *Combining Minds* draws together the threads of this problem and develops a powerful and flexible response to it *Virtues of Thought* Aryeh

Kosman,2014-03-31 Exploring what two foundational figures Plato and Aristotle have to say about the nature of human awareness and understanding Aryeh Kosman concludes that ultimately the virtues of thought are to be found in the joys and satisfactions that come from thinking philosophically whether we engage in it ourselves or witness others participation

Studies in Reflecting Abstraction Jean Piaget,2014-04-04 This translation of the French *Recherches sur l'abstraction réfléchissante* 1977 make available in English Piaget's only treatise on reflecting abstraction a process he came to attribute considerable importance to in his later thinking and which he believed to be responsible for many of the advances that take place in human development especially our understanding of mathematics Rich with empirical research on reflecting abstraction at work in the thinking of 4 to 12 year olds the studies in this volume examine its role in many contexts of cognitive development such as reasoning about mathematics forming analogies putting objects in order by size and comparing the resulting series and navigating through a wire maze His theoretical discussions explore the relationships between reflecting abstraction and other central processes in his later theory such as generalization becoming conscious and equilibration as the differentiation of possibilities and their integration into necessities These discussions indicate which aspects of his later theorizing were settled and which require further thought and investigation *Studies in Reflecting Abstraction* will be of interest to developmental and cognitive psychologists educationalists philosophers and anyone who seeks to understand human knowledge and its development *Thinking Through Poetry* Marjorie Levinson,2018-07-04

Thinking through Poetry Field Reports on Romantic Lyric pursues two goals The title signals the contribution to debates about reading Do we think through by means of with poems sympathetically elaborating their surfaces Is this compatible with a second meaning thinking through poems to their end solving a problem getting to its root its deep truth Third can we square these surface and depth readings with a speculative philosophical criticism to which the poem carries us where through denotes a going beyond All three meanings of through are in play throughout The subtitle applies field first to

Romantic studies since the 1980s a field that this project reflects upon from beginning to end Examples are drawn especially from Wordsworth but also from Coleridge and in assessing Romanticism's afterlife from Stevens Field also characterizes the shift from a unitary to a field concept of form during that time span a shift pursued through prolonged engagement with Spinoza Field thus underscores the synthesis of form and history the importance of analytic scale to that synthesis and the displacement of entity text by relation as the object of investigation While the book historically connects early nineteenth century intellectual trends to twentieth and twenty first century scientific revolutions its focuses on introducing new models to literary criticism Unlike accounts of the influence of science on literature or various literature X approaches literature and ecology literature and cognitive science it constructs its object of inquiry in a way cognate with work in non humanities disciplines thus highlighting a certain unity to human knowledge The claim is that specialists in literature should think the way distinguished scientists think and vice versa
