### Other Design and Analysis Topics

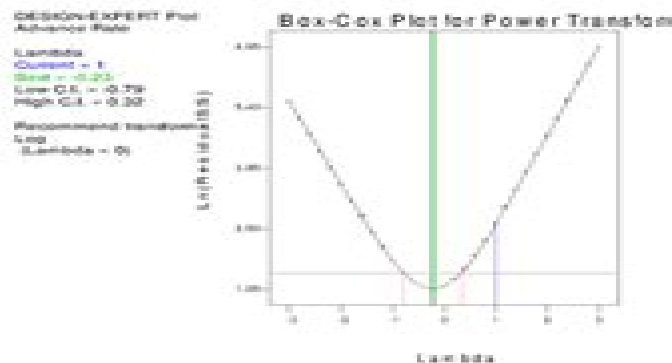

### Solutions

**15.1.** Reconsider the experiment in Problem 5.24. Use the Box-Cox procedure to determine if a transformation on the response is appropriate (or useful) in the analysis of the data from this experiment.

With the value of lambda near zero, and since the confidence interval does not include one, a natural log transformation would be appropriate.

**15.2.** In Example 6.3 we selected a log transformation for the drill advance rate response. Use the Box-Cox procedure to demonstrate that this is an appropriate data transformation.

Because the value of lambda is very close to zero, and the confidence interval does not include one, the natural log was the correct transformation chosen for this analysis.
