Chapra,1997 [Computer Books and Serials in Print ,1985](#) [Forthcoming Books Rose Arny,2004](#) [Numerical Calculations for Process Engineering Using Excel VBA](#) Chi M. Phan,2023-12-01 Numerical Calculations for Process Engineering Using Excel VBA provides numerical treatment of process engineering problems with VBA programming and Excel spreadsheets The problems are solving material and energy balances optimising reactors and modelling multiple factor processes The book includes both basic and advanced codes for numerical calculations The basic methods are presented in different variations tailored to particular applications Some macros are combined with each other to solve engineering problems Examples include combining the bisection method and binary search to optimise an implicit correlation combining golden section search with Euler s method to optimise a reactor and combining bisection code and Euler s method to solve steady state heat distribution The text also includes nonconventional examples such as harmony search and network analysis The examples include solutions to common engineering problems such as adiabatic flame temperature plug flow reactor conversion batch reactor heat diffusion and pinch analysis of heat exchanger networks The VBA code is presented with mathematical equations and flowcharts enabling the audience to adopt the solutions to different problems The book contains many demonstrations of numerical techniques to guide users It also includes useful summaries of VBA commands functions and Excel predefined functions accessible in VBA While the book is developed primarily for undergraduate students the book is a helpful resource for postgraduate students and engineers *Books in Print Supplement ,1984* **Environmental Fate and Transport Analysis with Compartment Modeling** Keith W. Little,2012-06-25 Environmental Fate and Transport Analysis with Compartment Modeling explains how to use the powerful highly flexible and intuitive compartment approach to estimate the distribution of chemical contaminants in environmental media in time and space Add this Easy to Use Approach to Your Environmental Modeling Toolbox This numerical technique enables readers to easily develop the equations that describe complex environmental problems by assembling the equations out of compartmental building blocks The compartments may describe spatial subunits of single or multi environmental media and the way one hooks them together implicitly provides the dimensionality of the problem With this approach assembling the equations to describe chemical fate and transport in a three dimensional multimedia system is fundamentally no more challenging than a one dimensional single medium problem Go Beyond Black Box Modeling with the Flexible GEM Software The book includes access to the Generic Environmental Model GEM a new software package developed by the author This software implements the compartment approach based on user prepared input files and solves the resulting mathematical equations It allows readers to solve linear nonlinear and steady state problems and offers four methods for solving dynamic problems Each solution technique is reviewed along with the error properties and the criteria for avoiding or minimizing numerical errors The book also describes solution techniques and the underlying mathematical
