A. Bauchau,J.I. Craig,2009-08-03 The authors and their colleagues developed this text over many years teaching undergraduate and graduate courses in structural analysis courses at the Daniel Guggenheim School of Aerospace Engineering of the Georgia Institute of Technology The emphasis is on clarity and unity in the presentation of basic structural analysis concepts and methods The equations of linear elasticity and basic constitutive behaviour of isotropic and composite materials are reviewed The text focuses on the analysis of

practical structural components including bars beams and plates Particular attention is devoted to the analysis of thin walled beams under bending shearing and torsion Advanced topics such as warping non uniform torsion shear deformations thermal effect and plastic deformations are addressed A unified treatment of work and energy principles is provided that naturally leads to an examination of approximate analysis methods including an introduction to matrix and finite element methods This teaching tool based on practical situations and thorough methodology should prove valuable to both lecturers and students of structural analysis in engineering worldwide This is a textbook for teaching structural analysis of aerospace structures It can be used for 3rd and 4th year students in aerospace engineering as well as for 1st and 2nd year graduate students in aerospace and mechanical engineering

Structural Analysis Jack C. McCormac, 2006-10-13 Presenting an introduction to elementary structural analysis methods and principles this book will help readers develop a thorough understanding of both the behavior of structural systems under load and the tools needed to analyze those systems Throughout the chapters they ll explore both statically determinate and statically indeterminate structures And they ll find hands on examples and problems that illustrate key concepts and give them opportunity to apply what they ve learned

Structural Analysis and Design H.B. Harrison, 2014-06-28 This book is designed to give the structural engineer training in microcomputer technology starting with theory and computer methods in Part 1 and culminating in extensive listings of programs in both Fortran 77 and Basic in Part 2 Because it provides programs and the information to understand and modify them for specific purposes it can be used as a text for graduate engineering students or by the professional engineer interested in learning how computers can be applied to practical problems Data files and worked solutions are included Some forty programs are explained ranging from cross sectional and connection analysis through equation solution methods to linear elastic analysis of plane and space frames as well as describing the non linear and large deformation treatment of a variety of frame cable and arch structures This new edition extensively revises the chapter on beam analysis with more powerful theory and programs suitable to the microcomputers of today
