An Introduction to Numerical Methods Using MATLAB K. Akbar Ansari,Bonni Dichone,2019 An Introduction to

Numerical Methods using MATLAB is designed to be used in any introductory level numerical methods course. It provides excellent coverage of numerical methods while simultaneously demonstrating the general applicability of MATLAB to problem solving. This textbook also provides a reliable source of reference material to practicing engineers, scientists, and students in other junior and senior level courses where MATLAB can be effectively utilized as a software tool in problem solving. The principal goal of this book is to furnish the background needed to generate numerical solutions to a variety of problems. Specific applications involving root finding, interpolation, curve fitting, matrices, derivatives, integrals, and differential equations are discussed, and the broad applicability of MATLAB is demonstrated. This book employs MATLAB as the software and programming environment and provides the user with powerful tools in the solution of numerical problems. Although this book is not meant to be an exhaustive treatise on MATLAB, MATLAB solutions to problems are systematically developed and included throughout the book. MATLAB files and scripts are generated, and examples showing the applicability and use of MATLAB are presented throughout the book. Wherever appropriate, the use of MATLAB functions offering shortcuts and alternatives to otherwise long and tedious numerical solutions is also demonstrated. At the end of every chapter, a set of problems is included covering the material presented. A solutions manual to these exercises is available to instructors.

Ultrasonic and Electromagnetic NDE for Structure and Material Characterization Tribikram Kundu, 2016-04-19. Bridging the gap between the two, Ultrasonic and Electromagnetic NDE for Structure and Material Characterization: Engineering and Biomedical Applications brings together the principles, equations, and applications of ultrasonic and Steel Design for Engineers and Architects. D. Fanella, R. Amon, B. Knobloch, A. Mazumder, 2012-12-06. In 1989, the American Institute of Steel Construction published the ninth edition of the Manual of Steel Construction, which contains the Specification for Structural Steel Buildings, Allowable Stress Design (ASD), and Plastic Design. This current specification is completely revised in format and partly in content compared to the last one, which was published in 1978. In addition to the new specification, the ninth edition of the Manual contains completely new and revised design aids. The second edition of this book is geared to the efficient use of the aforementioned manual. To that effect, all of the formulas, tables, and explanatory material are specifically referenced to the appropriate parts of the AISC Manual, as well as some material from the Standard Specifications for Highway Bridges published by the American Association of State Highway and Transportation Officials (AASHTO) and from the Design of Welded Structures published by the James F. Lincoln Arc Welding Foundation. These have been reproduced here with the permission of these organizations for the convenience of the reader. The revisions, which led to the second edition of this book, were performed by the first two authors, who are both experienced educators and practitioners.
