Rasch Models Gerhard H. Fischer, Ivo W. Molenaar, 2012-12-06 Thirty two years after the publication of the legendary Rasch book Rasch 1960 the rich literature on the Rasch model and its extensions was scattered in journals and many less accessible sources including grey literature When asked by students or junior researchers for references to the Rasch model it was a typical reaction on the part of the editors to state that it was difficult to name one or just a few actually only a whole list of references differing in notation and level of formal abstraction seemed to meet the request in most cases Therefore in 1992 the editors decided to invite a number of outstanding authors in the field of Rasch modeling to contribute to a book presenting the current state of knowledge about Rasch models The aim was not just to collect a number of papers on the subject rather to produce a well organized monograph To this end a workshop was held in Vienna from 25 to 27 February 1993 in which after a process of mutual reviewing drafts of all chapters were read and discussed by all authors leading to a more systematic organization of the topics treated in unified notation and terminology The workshop was sponsored by the University of Vienna here the editors would like to express their thanks in the name of all contributors both for the financial support and for the hospitality granted

Topics in Non-Gaussian Signal Processing Edward J. Wegman, Stuart C. Schwartz, John B. Thomas, 2012-12-06 Non Gaussian Signal Processing is a child of a technological push It is evident that we are moving from an era of simple signal processing with relatively primitive electronic circuits to one in which digital processing systems in a combined hardware software configuration are quite capable of implementing advanced mathematical and statistical procedures Moreover as these processing techniques become more sophisticated and powerful the sharper resolution of the resulting system brings into question the classic distributional assumptions of Gaussianity for both noise and signal processes This in turn opens the door to a fundamental reexamination of structure and inference methods for non Gaussian stochastic processes together with the application of such processes as models in the context of filtering estimation detection and signal extraction Based on the

premise that such a fundamental reexamination was timely in 1981 the Office of Naval Research initiated a research effort in Non Gaussian Signal Processing under the Selected Research Opportunities Program
