APLICACIÓN

El Aquilion es un tomógrafo helicoidal multislice que permite examinar el cuerpo entero.

El sistema genera 16 cortes por revolución usando el detector multicorte seleccionable de espesor de corte (SSMD). Además, el mecanismo de alta rotación y la unidad de rápida reconstrucción del sistema permite una rápida adquisición de la imagen para mejorar el rendimiento de los exámenes.

CARACTERÍSTICAS

• Tomografía de alta velocidad

Este sistema permite la adquisición simultánea de 16 cortes en 0.5 segundos de rotación usando al SSMD y produciendo la adquisición de datos volumétrica. El tiempo de espera para enfriar el Tubo de Rayos X se acorta porque el tiempo de exposición es corto. Por consiguiente, el tiempo de espera del paciente y el rendimiento específico son mejorados.

• Gran variedad de espesores de cortes

El SSMD, que provee la resolución de alta velocidad y alta examinación, permite cortar en cortes de espesores de 0.5 mm, 1 mm, 2 mm, 3 mm, 4 mm, 6 mm, 8 mm a ser seleccionados, basados en los objetivos de los exámenes.

• Reconstrucción de imagen avanzada

El sistema emplea la técnica de reconstrucción helicoidal TCOT (Tomografía de rayo-cónico real), el que compensa precisamente el ángulo del cono basado en el método de Feldkamp, de esa manera minimizando los artefactos relacionados al ángulo del cono y provee precisión, imágenes de alta resolución isotrópica a lo largo de todo el campo de la imagen.

• Alta calidad en imagen

El sistema logra bajo contraste en la resolución de 2 mm en 0.3%, y en alto contraste en la resolución de 0.35 mm. El escáner helicoidal multicorte puede ser administrado en relación costo-beneficio usando capas delgadas de corte en exámenes de rutina, y es tal esa alta precisión que imágenes en múltiples planos y en tres dimensiones pueden ser generadas de los datos del voxel de alta resolución. En la angiografía del cerebro, por ejemplo, una distancia de 40-mm puede ser examinada en 4 segundos con un espesor de corte de 0.5 mm. El uso de "adquisiciones apiladas" con cortes delgados minimiza el artefacto producido por el volumen parcial.

• Alto rendimiento para el flujo de pacientes

En combinación con una rápida tomografía, el generador de rayos x de alta energía de 60-kW y el Tubo de Rayos X 7.5-MHU, permiten adquirir los datos para exámenes de rutina, biopsia y generación de tres dimensiones en una sola adquisición tomográfica.

La imagen de cualquier espesor de corte puede ser generada más tarde en una nueva reconstrucción. Por ejemplo, después de que la tomografía de corte de 2mm sea realizada, las imágenes de varios espesores de corte pueden ser generados de datos sin procesar como una imagen gruesa de 10mm para exámenes de rutina, una imagen gruesa 5mm para examen de detalle, e imagen 0.5mm o 1mm para la generación de un volumen 3D.

• Angulación de escaneo helicoidal

El escaneo helicoidal con angulación de la estructura de adquisición (gantry), desde 30° hacia adelante y 30° hacia atrás, está disponible porque el sistema emplea la técnica de reconstrucción TCOT.

• Fluoroscopia por tomografía multislice (opcional)

La fluoroscopia convencional muestra sólo un corte, pero la fluoroscopia por tomografía multicorte permite en tiempo real obtener 3 imágenes por combinación de los datos provenientes de SSMD. La fluoroscopia mediante tomografía multicorte mejora significativamente la operatividad en los procedimientos de biopsia y de intervencionismo.

Schlegel, 2010-01-04 Present Your Research to the World The World Congress 2009 on Medical Physics and Biomedical Engineering the triennial scientific meeting of the IUPESM is the world's leading forum for presenting the results of current scientific work in health related physics and technologies to an international audience. With more than 2 800 presentations it will be the biggest conference in the fields of Medical Physics and Biomedical Engineering in 2009. Medical physics, biomedical engineering and bioengineering have been driving forces of innovation and progress in medicine and healthcare over the past two decades. As new key technologies arise with significant potential to open new options in diagnostics and therapeutics it is a multidisciplinary task to evaluate their benefit for medicine and healthcare with respect to the quality of performance and therapeutic output. Covering key aspects such as information and communication technologies, micro and nanosystems, optics and biotechnology the congress will serve as an inter and multidisciplinary platform that brings together people from basic research, R D industry and medical application to discuss these issues. As a major event for science, medicine and technology the congress provides a comprehensive overview and in depth first hand information on new developments, advanced technologies and current and future applications. With this Final Program we would like to give you an overview of the dimension of the congress and invite you to join us in Munich. Immunotherapy in Head and Neck Cancers and Brain Tumors Ling Zhang,Dhan Kalvakolanu,Dan Yu,2023-11-10 Head and neck cancers HNCs and brain tumors continue to be fatal diseases in most countries of the world In the past decade cancer immunotherapy has emerged as a promising therapeutic strategy and achieved unprecedented bench to bedside clinical success in the field of oncology Different from traditional surgery chemotherapy and radiotherapy the current cancer immunotherapy aims to recover or enhance the immune system of a patient to recognize and eliminate cancerous cells from the primary tumor and metastases Numerous immunotherapy strategies in particular immune checkpoint inhibitors adoptive cellular therapies and cancer vaccines are under pre clinical investigations or in ongoing clinical trials in a range of cancer types Among them novel drugs have continued to be approved by the FDA which has revolutionized the current cancer treatment by prolonging the survival time of the patients especially in advanced unresectable tumors However not all patients achieve complete responses to immunotherapy due to de novo or acquired resistance Also immunotherapy related adverse events are common although it has a better safety profile than the traditional treatments It has limited the application and efficacy of cancer immunotherapy in tumors including the HNCs and brain tumors and highlights the need for new strategies
