INSTALLATION & CONNECTION

Install the ESC according to the diagram shown below

Switch on the transmitter. Lift the car with the 4 wheels un-touching and turn on the ESC power. Right after turn on the power of the ESC, you will hear a multiple sound indicating the ESC is starting work and auto-setting the throttle neutral. When succeed in setting neutral, it will then denote by another confirmation sound. If it is failed setting neutral, there will be no any confirmation sound. This ESC is applicable to the transmitter with the setting of 50% throttle 50% brake/reverse or 70% 30%.

Adjust & make sure the Throttle forward direction coincides with the ESC forward direction. Assume the car with 4 wheels lifted un-touching. Push the throttle trigger forwards to start motor running, pull the throttle trigger backwards & hold it. If the system keeps braking, the throttle forward direction coincides with the ESC forward direction. Otherwise, if the system only has a brief braking then driving reversely, the throttle and ESC forward directions don't coincide with each other. Change the throttle reversing switch of the transmitter, release the throttle switch, turn off & then turn on the ESC power again. After auto-set neutral & push the throttle trigger forwards the car should also drive forward & the non-coincidence is corrected. Thus, changing any two of the motor wires will correct the non-coincidence problem.

Motor rotating direction:- Slowly apply throttle to check if the motor is rotating in the correct direction you desired.

You may need to swap the any two motor wires to get the wheels to spin in right directions.
