**Semiconductors** Junhao Chu,Arden Sher,2007-11-21 Narrow gap semiconductors obey the general rules of semiconductor  
science but often exhibit extreme features of these rules because of the same properties that produce their narrow gaps  
Consequently these materials provide sensitive tests of theory and the opportunity for the design of innovative devices For  
example narrow gap semiconductors are the most important materials for the preparation of advanced modern infrared  
systems In this book the authors offer clear descriptions of crystal growth and the fundamental structure and properties of  
these unique materials Topics covered include band structure optical and transport properties and lattice vibrations and  
spectra A thorough treatment of the properties of low dimensional systems and their relation to infrared applications is  
provided In addition to covering the technology of photoconductive detectors photovoltaic detectors metal insulator  
semiconductor devices quantum well infrared photodetectors infrared lasers and single photon detectors Physics and  
Properties of Narrow Gap Semiconductors helps readers to understand semiconductor physics and related areas of materials  
science and how they relate to advanced opto electronic devices      *H.S.C Sample Papers Science Stream for 2022 Exam*

Practical Design of Ships and Other Floating Structures held in China in September 2001 the first PRADS of the 21st Century

The overall aim of PRADS symposia is to advance the design of ships and other floating structures as a professional discipline and science by exchanging knowledge and promoting discussion of relevant topics in the fields of naval architecture and marine and offshore engineering. In line with the aim in welcoming the new era this Symposium is intended to increase international co operation and give a momentum for the new development of design and production technology of ships and other floating structures for efficiency economy safety and environmental production. The main themes of this Symposium are Design Synthesis Production Hydrodynamics Structures and Materials of Ships and Floating Systems. Proposals for over 270 papers from 26 countries and regions within the themes were received for PRADS 2001 and about 170 papers were accepted for presentation at the symposium. With the high quality of the proposed papers the Local Organising Committee had a difficult task to make a balanced selection and to control the total number of papers for fitting into the allocated time schedule approved by the Standing Committee of PRADS. Volume I covers design synthesis production and part of hydrodynamics. Volume II contains the rest of hydrodynamics and structures and materials.
