Supin,Vladimir V. Popov,Alla M. Mass,2012-12-06 This book is actually a product of efforts of many people not only of the authors Wide investigations of marine mammals began in Russia that time in the former Soviet Union in the 1960s when a few teams of enthusiasts founded in captivity experimental stations intended for keeping dolphins and seals and for performing experimental studies of these fascinating animals It was a time when attention of many people throughout the world was attracted to dolphins and other marine mammals due to appearance of oceanariums and dolphinariums which demonstrated unique capabilities of these animals So scientists in many countries

concentrated on studies of them There was much to learn about the morphology physiology and psychology of marine mammals and investigators spending their time and efforts on studies in this field were rewarded by a number of surprising findings The authors of this book represent one of such research teams focused on the neuro and sensory physiology of marine mammals A few decades of studies naturally resulted in the idea to summarize in a book both the results of these studies and a large body of data in adjacent fields Our goal was to synthesize the many research findings and the present knowledge on sensory capabilities and mechanisms of sensory systems of aquatic mammals We realize however that the appearance of this book was made possible due to the help and assistance of many colleagues

The Social Life of the Lion J.A. Rudnai, 2012-12-06 THE HABITAT Nairobi National Park lies to the south southeast of the capital of Kenya Nairobi where the Athi Plains meet the Eastern escarpment of the Rift Valley These plains form part of the semi arid highland plateau lying between the coast and the Rift Valley Both the city itself and the Park bordering it are a meeting place of two generally distinct types of landscape and climate While to the east southeast are semi arid plains with grasslands and scattered trees the western north western parts are higher hilly cooler more humid and support lush forests The combination of latitude a little over one degree south of the Equator and altitude average of 1600 m 5000 5500 ft combine to give Nairobi a most equable climate where the temperature varies during the year between about 11 degrees and 27 degrees centigrade mean minimum and mean maximum for eight years However considerable changes are usually experienced within each day and a rise from 14 degrees C at 0600 hours to 22 degrees at 1100 hours is not unusual Nairobi Park has a unique concentration of wild animals living in their natural habitat less than 10 km from the centre of a modern city of half a million people The only interference with the natural course of events in the Park is that normally required for the proper management of a game park such as maintenance of roads and dams and in this particular case partial fencing towards the city
