Smokescreen Chad T. Hanson,2021-05-25 Smokescreen cuts through years of misunderstanding and misdirection to make an impassioned evidence based argument for a new era of forest management for the sake of the planet and the human race Natural fires are as essential as sun and rain in fire adapted forests but as humans encroach on wild spaces fear arrogance and greed have shaped the way that people view these regenerative events and given rise to misinformation that threatens whole ecosystems as well as humanity s chances of overcoming the climate crisis Scientist and activist Chad T Hanson explains how natural alarm over wildfire has been marshaled to advance corporate and political agendas notably those of the logging industry He also shows that in stark contrast to the fear driven narrative around these events contemporary research has demonstrated that forests in the United States North America and around the world have a significant deficit of fire Forest fires including the largest ones can create extraordinarily important and rich wildlife habitats as long as they are not subjected to postfire logging Smokescreen confronts the devastating cost of current policies and practices head on and ultimately offers a hopeful vision and practical suggestions for the future one in which both communities and the climate are protected and fires are understood as a natural and necessary force
