Terry Hewitt, 2012-12-06 Visualization in scientific computing is getting more and more attention from many people Especially in relation with the fast increase of computing power graphic tools are required in many cases for interpreting and presenting the results of various simulations or for analyzing physical phenomena The Eurographics Working Group on Visualization in Scientific Computing has therefore organized a first workshop at Electricite de France Clamart in cooperation with ONERA Chatillon A wide range of papers were selected in order to cover most of the topics of interest for the members of the group for this first edition and 26 of them were presented in two days Subsequently 18 papers were selected for this volume The presentations were organized in eight small sessions in addition to discussions in small subgroups The first two sessions were dedicated to the specific needs for visualization in computational sciences the need for graphics support in large computing centres and high performance networks needs of research and education in universities and academic centres and the need for effective and efficient ways of integrating numerical computations or experimental data and graphics Three of those papers are in Part I of this book The third session discussed the importance and difficulties of using standards in visualization software and was related to the fourth session where some reference models and distributed graphics systems were discussed Part II has five papers from these sessions

New Technologies for Supercolliders L. Cifarelli, Thomas Ypsilantis, 2012-12-06 The present volume is based on the proceedings of the 12th Workshop of the INFN ELOISATRON Project held at the Ettore Majorana Centre for Scientific Culture EMCSC Erice fra pani Sicily Italy in the period September 15 20 1990 The proceedings deal with the presentation of New Technologies for Supercolliders Three new energy frontiers 16 40 and 200 TeV are now opened up for the future of Subnuclear Physics Basic problems above the Fermi energy are crowding up but no one knows the energy levels needed for their solution This is why the technology for experiments with the new generation of Supercolliders needs to be pursued having in mind the problems which are of common interest in the three energy frontiers The primary purpose of the

Workshop was to contribute towards the highest energy limit in the search for new instruments and new technologies Furthermore the present status and performances of various detector technologies were reviewed The possible options for a powerful apparatus whose goal would be the discovery of the top Higgs and SUSY particles in a very high energy high rate environment were finally analysed The Workshop was sponsored by the Italian National Institute for Nuclear Physics INFN the Italian Ministry of Education the Italian Ministry of Scientific and Technological Research and the Sicilian Regional Government We are thankful to the staff of EMCSC for their efficient and warm support *VMEbus in Research* Chris Eck,C. From the Web to the Grid and Beyond René Brun,Federico Carminati,Giuliana Galli Carminati,2012-01-10 Born after World War II large scale experimental high energy physics HEP has found itself limited ever since by available accelerator detector and computing technologies Accordingly HEP has made significant contributions to the development of these fields more often than not driving their innovations The invention of the World Wide Web at CERN is merely the best known example out of many This book is the first comprehensive account to trace the history of this pioneering spirit in the field of computing technologies It covers everything up to and including the present day handling of the huge demands imposed upon grid and distributed computing by full scale LHC operations operations which have for years involved many thousands of collaborating members worldwide and accordingly provide the original and natural testbed for grid computing concepts This book takes the reader on a guided tour encompassing all relevant topics including programming languages software engineering large databases the Web and grid and cloud computing The important issue of intellectual property regulations for distributed software engineering and computing is also addressed Aptly the book closes with a visionary chapter of what may lie ahead Approachable and requiring only basic understanding of physics and computer sciences this book is intended for both education and research *Computational Physics: Proceedings Of The Cp90 International Conference* Armin G Tenner,1991-04-30 The invited talks include applications from the fields of solid state physics plasma physics hydrodynamics high energy physics thermodynamics atomic and molecular physics chemistry statistical physics earth sciences neural networks meteorology astrophysics and presentations on cellular automata and quantum Monte Carlo methods The emphasis is on methods of software development and engineering graphic tools and storage of physical data *New Computing Techniques In Physics Research Ii - Proceedings Of The Second International Workshop On Software Engineering Artificial Intelligence And Expert Systems In High Energy And Nuclear Physics* Denis Perret-gallix,1992-09-04 A vivid example of the growing need for frontier physics experiments to make use of frontier technology is in the field of Artificial Intelligence AI and related themes By AI we are referring here to the use of computers to deal with complex objects in an environment based on specific rules Symbolic Manipulation to assist groups of developers in the design coding and maintenance of large packages Software Engineering to mimic human reasoning and strategy with knowledge bases to make a diagnosis of

equipment Expert Systems or to implement a model of the brain to solve pattern recognition problems Neural Networks These techniques developed some time ago by AI researchers are confronted by down to earth problems arising in high energy and nuclear physics However similar situations exist in other big sciences such as space research or plasma physics and common solutions can be applied The magnitude and complexity of the experiments on the horizon for the end of the century clearly call for the application of AI techniques Solutions are sought through international collaboration between research and industry
