technologies *Economics of Structural and Technological Change* Cristiano Antonelli, Nicola De Liso, 2002-09-11

Technology has long been seen as a path to economic growth. However, there is considerable debate about the exact nature of this relationship. *Economics of Structural and Technological Change* employs a wide range of theoretical and applied approaches to explore the concept of technological change. The book begins with a series of in-depth discussions of the economic analysis of technological change. The second section contains a discussion of theoretical models of technological change focusing on issues such as time and innovation. The third section brings together a number of applied analyses of technological change and examines the effect of factors such as human resource constraints, patenting, and science and technology indicators. *Innovation in Low-tech Firms and Industries* Hartmut Hirsch-Kreinsen, David Jacobson, 2008-01-01

This very valuable book collects together excellent empirical essays on what amounts to a silent majority in advanced industrial societies: low and medium tech manufacturing industries. Such industries employ more people and make a larger contribution to aggregate value creation than their more lauded high tech counterparts, and moreover they constitute extremely important customer industries for such higher tech producers. They may be neglected, but they are not going away. Indeed, this volume shows that they are growing and adapting to the new competitive challenges of globalization. Attending to the dynamics of innovation and change in this large sector is crucial for understanding processes of social and economic restructuring in Europe today. The essays in this volume are the first place to look for insight into this extremely important area of political economic life in Europe. Gary Herrigel, University of Chicago, US. *Innovation in Low Tech Firms and Industries* challenges the currently fashionable notion that the advent of a knowledge based economy demands that all social resources should be diverted to high technology industries. Hirsch, Kreinsen, and Jacobson point out these constitute a small part of even the most advanced economies. Attention has been diverted from the important innovation processes which occur in low and medium technology LMT sectors. This volume calls on us to achieve a much better and wiser balance in our industrial policy. Terrence McDonough, National University of Ireland, Galway. The authors of this book make an urgently needed provocative point: ordinary engineering and technology, low tech, continue to be of greater importance in our knowledge society than high tech activities, and they may be similarly demanding by the competence they require and produce. This counteracts the exaggerated hype about high tech firms or activities. The high tech classification itself is highly arbitrary and often superficial. The authors show in what way low tech activities and firms are important and how they can be cultivated to buttress the economic strength of industrial and post industrial nations. Researchers and policymakers please take note. Arndt Sorge, Wissenschaftszentrum Berlin, Germany, and University of Groningen, The Netherlands. It is a general understanding that the advanced economies are currently undergoing a fundamental transformation into knowledge based societies. There is a firm belief that this is based on the development of high tech industries. Correspondingly, in this scenario, low tech sectors appear to be less important. A critique of this widely held belief is the starting point of this book. It is often overlooked that many of

the current innovation activities are linked to developments inside the realm of low tech Thus the general objective of the book is to contribute to a discussion concerning the relevance of low tech industries for industrial innovativeness in the emerging knowledge economy Providing examples of both theoretical and empirical research in this area Innovation in Low tech Firms and Industries will be of great interest to postgraduate students and academic researchers in innovation studies It will also appeal to policy makers in the field of innovation policy as well as industrial economists and sociologists interested in traditional industries in advanced economies

The Technological Specialization of Advanced

Countries D. Archibugi,Mario Pianta,1992-09-30 Advanced countries have shown an increasing convergence in their economic performance and technological intensity with a relative decline of the position of the United States and the emergence of the European and Japanese economies The Technological Specialization of Advanced Countries moves beyond aggregate patterns and examines the sectoral structure of technological activities the process of specialization and the impact on national performance Indicators of technology and of scientific activity are examined together with other economic and R D data providing a wealth of empirical evidence on the activities and areas of strength and weakness of individual countries The amount of disaggregated data provided and the assessment offered on the state of art in science and technology indicators make The Technological Specialization of Advanced Countries an important reference work A description of the fields of national effort is provided and a special study is devoted to the fields of greater innovative dynamism where patenting has grown most rapidly Over time countries have concentrated their technological efforts in the fields of their greater strength under the pressure of increasing international competition and the proprietary nature of know how Conversely in science there has generally been a decrease in the degree of specialization with countries entering new fields of research taking advantage of the open flow of scientific knowledge For science and technology policy the findings of The Technological Specialization of Advanced Countries suggest that national efforts should be combined with the growing international integration The aims of maintaining established areas of strength and of developing new specializations in emerging fields should be balanced and a more selective policy at the sectoral level is suggested

Greentech Innovation and Diffusion Philipp Hoff, 2012-03-05 The world is going green Sustainable technologies such as renewable energy and electric vehicles are increasingly becoming part of our daily life This dissertation fills the ensuing gap by providing an insight into the emerging German greentech industry one of the largest in the world It develops an integrated and interdisciplinary theoretical framework in which to assess the relationships between innovation growth and financing from a firm level perspective it then tests this framework empirically In essence the study finds that 1 Innovative activity and corporate growth depend heavily on the availability of capital At the same time it appears that particularly innovative firms are more likely to face financial constraints 2 A lack of funds is very apparent for around a quarter of the firms investigated and seems most severe in the early part of the growth state where firms focus on commercializing existing products 3 Government support programs only partially offset these effects
