Ai '92 - Proceedings Of The 5th Australian Joint Conference On Artificial Intelligence A Adams, L Sterling, 1992-10-09 The papers in this volume deal with academic research topics as well as practical applications in AI Special emphasis is given to computer vision machine learning neural networks mixed with theory of logic and reasoning and practical applications of expert systems in industry and decision support

The Personal Experience of Time B. Gorman, 2013-03-09 The fundamental nature of human time experience has concerned artists poets philosophers and

scientists throughout the ages Any consideration of human action requires awareness of its temporal aspects However simply to view time in the same units and dimensions as the physicist employs in describing events robs personal time of its lived quality The use of physical time concepts in the description of human events is often artificial and misleading It fails to account for the facts that human time estimates rarely match clock and calendar time that societies and individuals demonstrate vast differences in their constructions and uses of time and that temporal perceptions and attitudes change within an individual both during a single day and throughout his life span The present volume does not view time as something that is sensed in the same way that one would sense or perceive spatial or sensory stimuli Rather it views time as a complex set of personally experienced cognitive constructs used by individuals and cultures to account for the order the duration and the organization of events The authors in this book take a strong departure from earlier psychophysical studies of a time sense and address themselves to the uses and elaborations of time concepts in personal and social functioning

Communication from an Artificial Intelligence Perspective Andrew Ortony, Jon Slack, Oliviero Stock, 2012-12-06 Castel Ivano originally built in 1375 is one of many beautiful and impressive castles strategically placed atop hills in Trentino's Valsugana in Northern Italy It was in this castle on a series of brilliant sunny crisp November days in 1990 that an international group of computer scientists and cognitive scientists met at a workshop to discuss theoretical and applied issues concerning communication from an Artificial Intelligence and Cognitive Science perspective About forty people representing nine countries participated in the workshop either as speakers discussants or observers The main motivation for the workshop was to address the question of whether and how current computational approaches to communication can or might be able to accommodate the range of complexities that characterize both human human and human machine communication The chapters in this book are based on the papers that were presented at the workshop They are presented in an order that is determined primarily by the specificity of the topics they address The initial chapters are more theoretical in nature with an emphasis on formal approaches to communication The middle chapters focus on particular application issues such as the generation of multimedia documents and the role of planning in building systems to support human human or human machine interaction The final few chapters consider more general issues relating to communication such as the influence of social structure on and the role of affect in communication

Computational Modeling of Narrative Inderjeet Mani, 2022-05-31 The field of narrative or story understanding and generation is one of the oldest in natural language processing NLP and artificial intelligence AI which is hardly surprising since storytelling is such a fundamental and familiar intellectual and social activity In recent years the demands of interactive entertainment and interest in the creation of engaging narratives with life like characters have provided a fresh impetus to this field This book provides an overview of the principal problems approaches and challenges faced today in modeling the narrative structure of stories The book introduces classical narratological concepts from literary theory and their mapping to computational approaches It

demonstrates how research in AI and NLP has modeled character goals causality and time using formalisms from planning case based reasoning and temporal reasoning and discusses fundamental limitations in such approaches It proposes new representations for embedded narratives and fictional entities for assessing the pace of a narrative and offers an empirical theory of audience response These notions are incorporated into an annotation scheme called NarrativeML The book identifies key issues that need to be addressed including annotation methods for long literary narratives the representation of modality and habituality and characterizing the goals of narrators It also suggests a future characterized by advanced text mining of narrative structure from large scale corpora and the development of a variety of useful authoring aids This is the first book to provide a systematic foundation that integrates together narratology AI and computational linguistics It can serve as a narratology primer for computer scientists and an elucidation of computational narratology for literary theorists It is written in a highly accessible manner and is intended for use by a broad scientific audience that includes linguists computational and formal semanticists AI researchers cognitive scientists computer scientists game developers and narrative theorists Table of Contents List of Figures List of Tables Narratological Background Characters as Intentional Agents Time Plot Summary and Future Directions

Geek and Hacker Stories Brian Alleyne, 2018-11-02 Geeks hackers and gamers share a common geek culture whose members are defined and define themselves mainly in terms of technology and rationality The members of geek culture produce and circulate stories to express who they are and to explain and justify what they do Geek storytelling draws on plots and themes from the wider social and cultural context in which geeks live The author surveys many stories of heated exchanges and techno tribal conflicts that date back to the earliest days of personal computing which construct the self and the enemy and express and debate a range of political positions *Geek and Hacker Stories* will be of interest to students of digital social science and media studies Both geeky and non technical readers will find something of value in this account
