

Activity Guide - Lists Make

Step 1 - Try the app

- Add several reminders to the app.
- Scroll through your reminders.

Discuss with a Partner

- What programming patterns with lists do you think you'll need to use?

Step 2 - Plan

Lists: This app uses one list. Give it a name! What does it store?

List Name	What the List Stores
Reminder	It stores the reminder

Other Variable: This app uses one extra variable in addition to the list. What does it store?

Variable Name	What the Variable Stores
Index	It stores the different pages

Conditionals: Review the List Scrolling Pattern. Consider how you will use this in your app.

```

var index = 0;
var myList = ["Banana", "Apple", "Pear"]

onEvent(▼ "leftButton", ▼ "click", function() {
  if (index > 0) {
    index = index - 1;
  }
  updateScreen();
})

onEvent(▼ "rightButton", ▼ "click", function() {
  if (index < myList.length - 1) {
    index = index + 1;
  }
  updateScreen();
})

function updateScreen() {
  setProperty(▼ "titleLabel", ▼ "text", myList[index]);
}
  
```

How does it work?

Many App Lab projects run in the following way.

1. The user is interested in seeing items in a list, like a list of favorite foods, or a list of reminders.
2. The app shows the user one item in the list at a time.
3. By clicking buttons (or otherwise interacting with the app) the user can move back and forth through the list, one item at a time, to see every item.

This pattern allows a user to "scroll" through all the items in the list. In order to make it work, create an index variable and a list. Then use the "Counter Pattern with Boundary" pattern to create event handlers to change the value of the index.

This pattern makes sense to use with the updateScreen pattern since you will need at least two buttons for scrolling left and right through the list but afterwards will use the same code to update the screen.

Function: What code may be repeated in your app? What should be included in your function(s)?
