

The Circulatory System

How are materials moved by the circulatory system?

Why?

The circulatory system delivers nutrients and oxygen to every part of an organism's body and also removes carbon dioxide and other wastes at the same time. In humans the circulatory system consists of a liquid tissue, blood, which moves through a system of arteries, veins, and capillaries. The most important part of the human circulatory system is the pump—your heart. This specialized muscle keeps the blood moving day and night, which keeps all other body systems running smoothly.

Model 1 – Oxygen Content in Blood During Circulation

*Percentages are used for comparative purposes only.
